vic.ai

The Era of Intelligent Accounting

Cloud accounting, machine learning and processing power converge

Double Entry Accounting

Invention of Double Entry Accounting by Benedetto Cotrugli

(1458)

500 years

Electronic Accounting

The first calculator

The first proprietary accounting systems 1960

(1960 - 1990)

100 years

Digital Accounting

VisiCalc

Mass generalised Accounting Systems

Cloud Accounting

(1979 - 2010s)

35 years

Intelligent Accounting

Vic.ai

AI with human in the loop

then

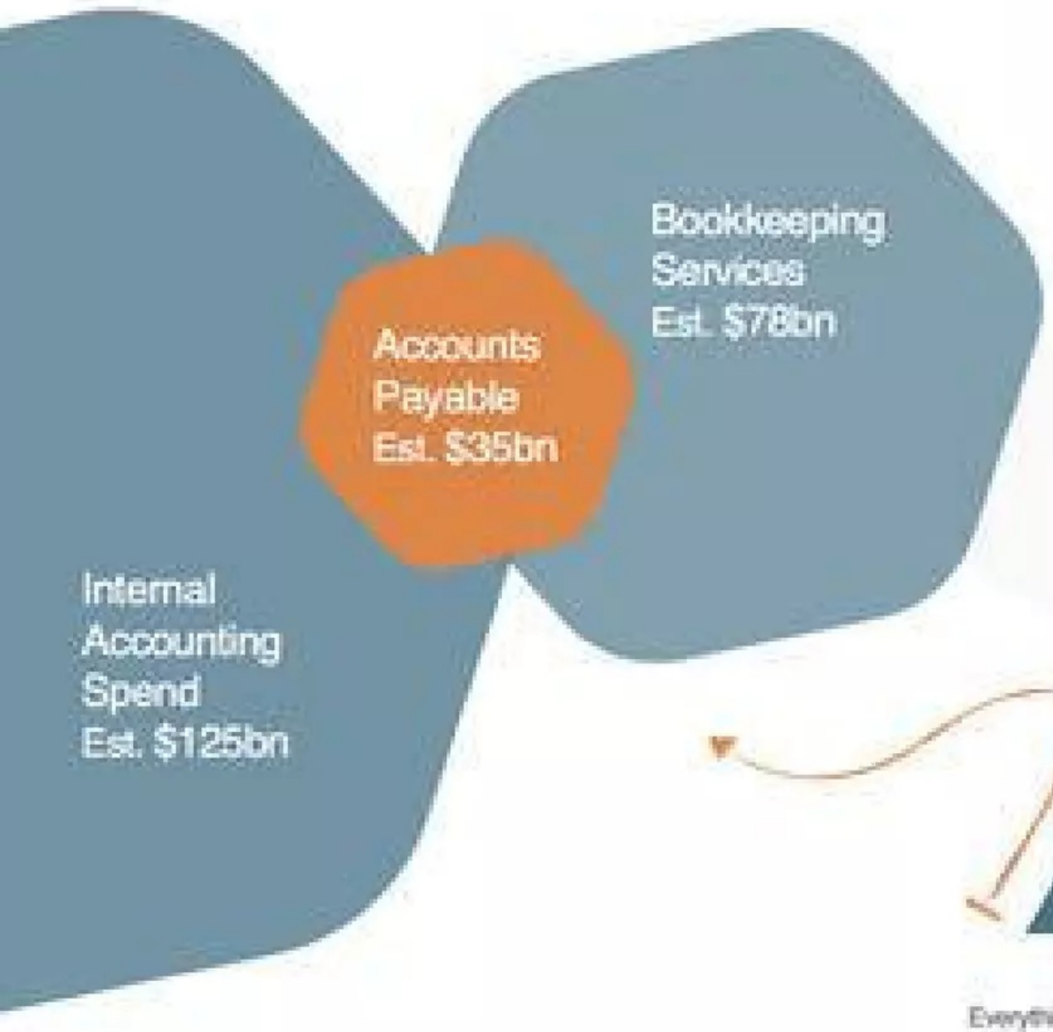

Largely Autonomous Accounting Platforms

(2019 -)

10 years

All companies need accounting services ($200bn US market)

Accounts Payable processing is our beachhead and we are expanding into the other areas

Everything below the controller level of the accounting function will be largely automated in the foreseeable future

Target Customers

Accounting firms and Mid Market clients

#1

Outsourced Accounting Firms

88% of Accountants feel pressure to automate and protect themselves from disruptive changes

Vic.ai provides the technology platform for all existing accounting firms to compete with offshore services and other automation threats

Inbound Marketing

#2

Enterprise Clients

($100mm - $1bn)

The same technology works equally well with mid-market accounting departments

Resellers and Direct Sales model

Data access is our unfair advantage

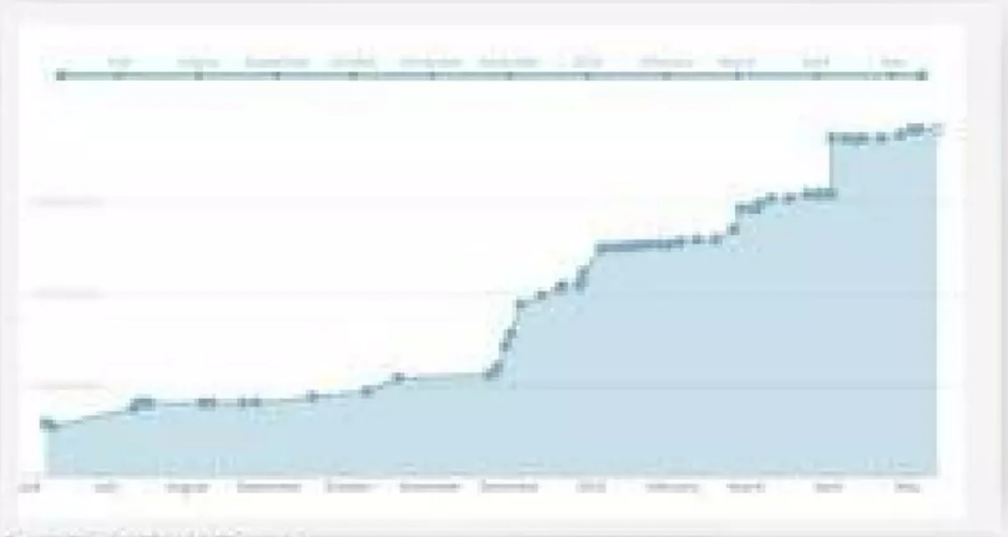

vic.ai

We have incredible amounts of accounting data - and it's growing

Why?

- An unusual partnership led to our unfair advantage
- Dataset acquired from [redacted]
- Cloud Accounting data for 40,000 companies acquired
- 200M+ financial documents and corresponding transactions
- + 10B other ERP data points

...now our dataset is growing from daily usage of the vic.ai platform

*Total verified cost lines in dataset

= unique growing data moat

Here's how our Invoice Processing Module saves time

vic.ai

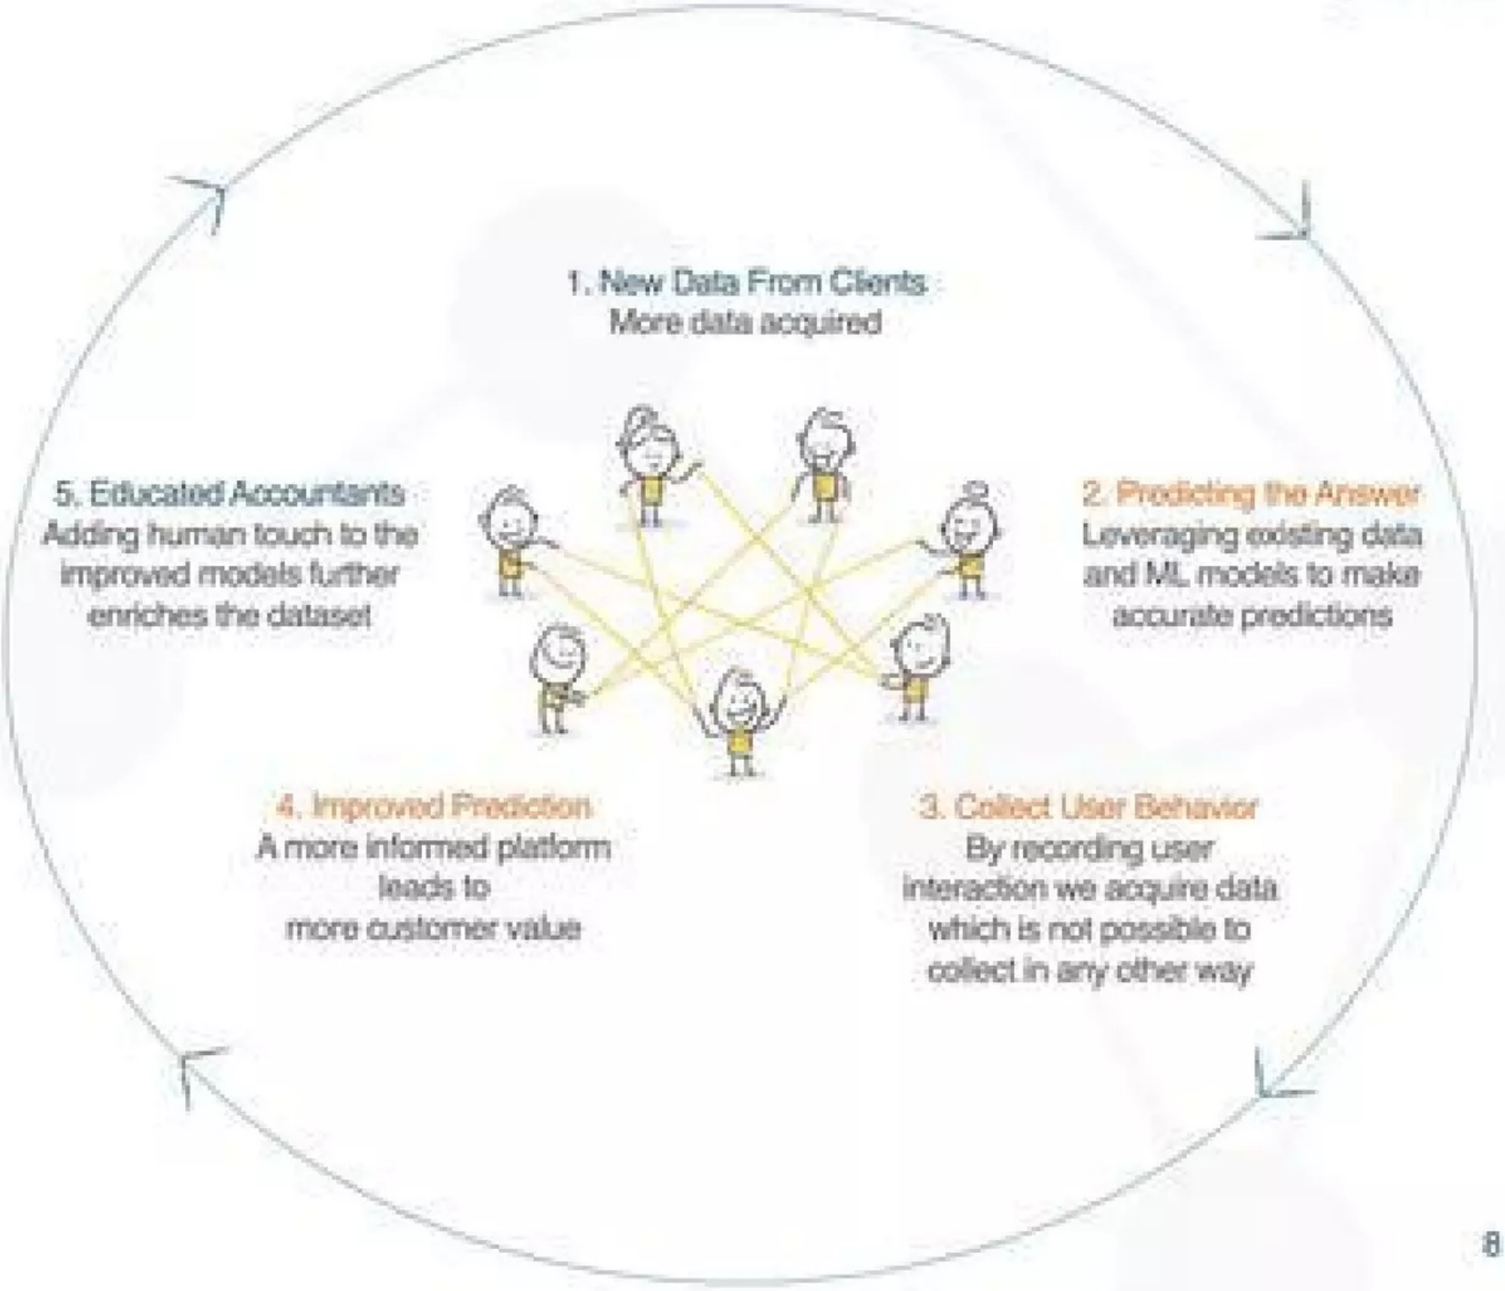

- Vic.ai shifts the workflow from transaction entry to exception handling
- Accountants are correcting or accepting the AI predictions thereby improving the system across all clients
- The platform frees up significant resources, speeds up turn-around time and improves accuracy

Our moat deepens with every transaction

Vic.ai is a perpetual learning loop

- By using the platform Accountants train our AI system
- This leads to better advice and increased automation
- Which, in turn, makes them more satisfied with the service

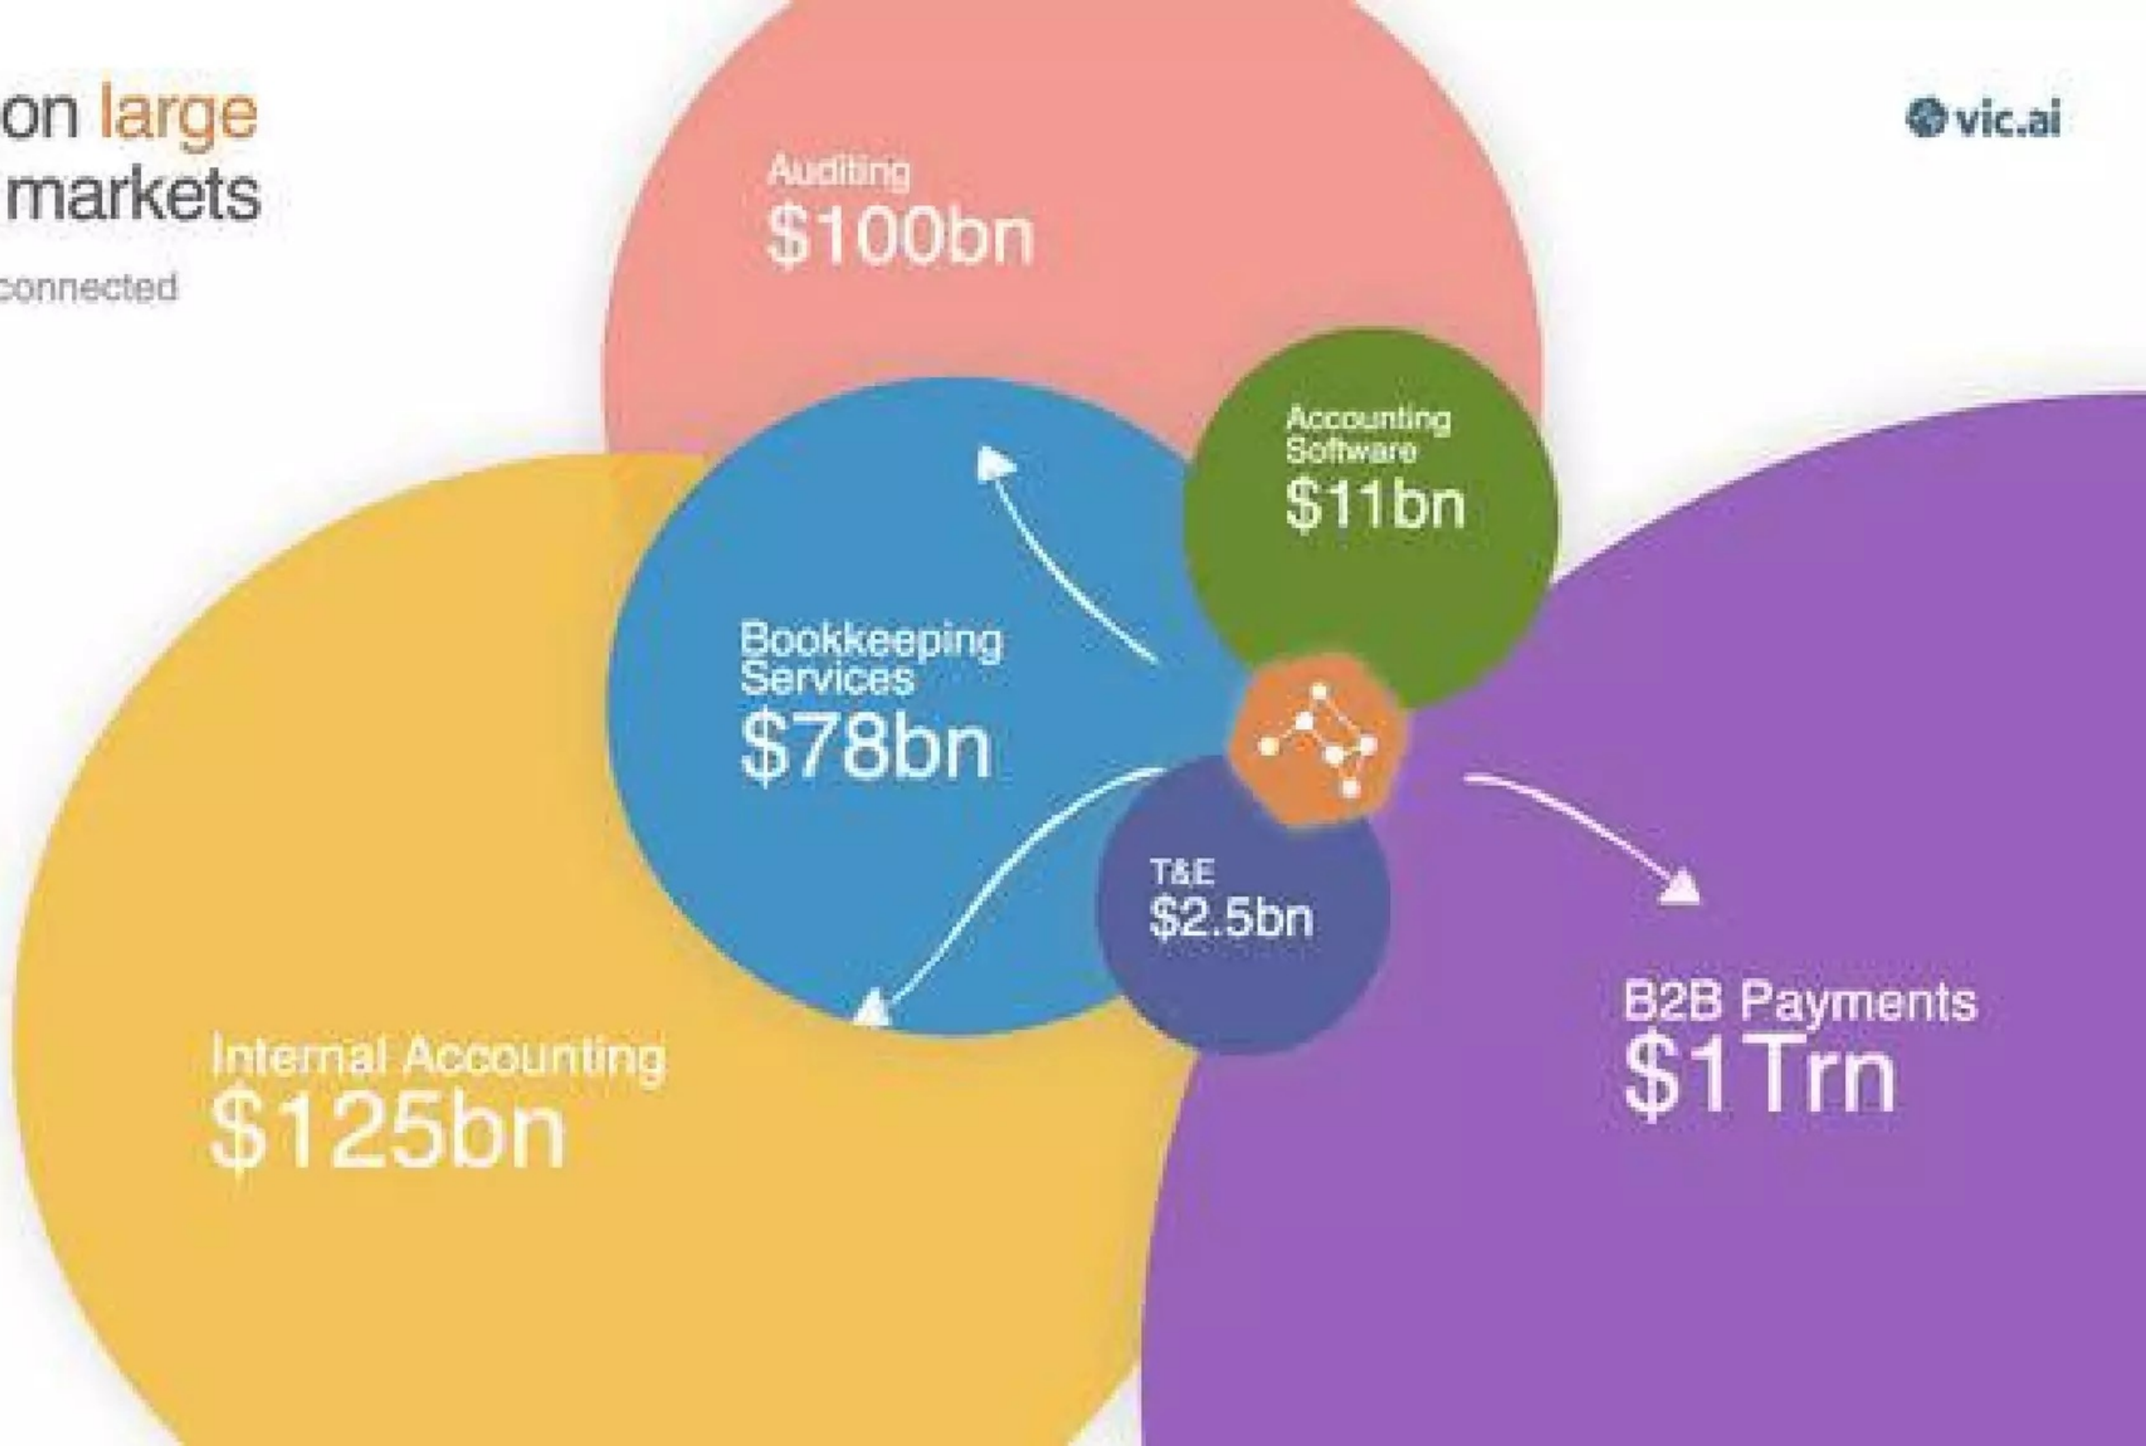

The learning loop is key to future advanced platform skills

Our eyes on large inefficient markets

They are all interconnected opportunities
