# Vulcan Cyber
# Remediation Orchestration

**From vulnerability found,**
**to vulnerability fixed.**

VULCAN.

# Why Vulcan Cyber?

## About Us

- Founded in Feb. 2018
- Offices in Tel Aviv, San Francisco, Austin
- 40 people and growing
- 500% YoY ARR growth
- $35M raised

# Fixing Vulnerabilities is a Higher Priority Than Ever, Yet Most Breaches Still Involve Unsolved Vulnerabilities

**99%**

*of vulnerabilities exploited in 2020 will be previously known to security teams*

*Time to exploit reduced from 30 days to*

***7 days***

**80%**

*of public exploits are published before their CVEs*

↓

**60%**

*of breaches in 2019 involved unpatched vulnerabilities*

# Fixing a Single Vulnerability Requires Complex Processes and Way Too Much Time

Security teams coordinate with IT and DevOps teams
**to fix each vulnerability, one at a time:**

1. **Scan & discover** vulnerabilities
2. **Consolidate & prioritize** vulnerabilities
3. **Research & identify the right solution** and its business impact
4. **Collaborate** with the vulnerable asset owner **& provide relevant data**
5. **Manage & analyze** the fixing process, and **handle rejections**

# Fixing a Single Vulnerability Requires Complex Processes and Way Too Much Time

Today's tools don't help get fix done:

1. **Scan & discover** vulnerabilities
2. **Consolidate & prioritize** vulnerabilities
3. **Research & identify the right solution** and its business impact
4. **Collaborate** with the vulnerable asset owner **& provide relevant data**
5. **Manage & track** the fixing process, and **handle rejections**

Vulnerability management tool focus today

Manual, complex & resource-intensive
(existing vulnerability management tools don't help)

VULCAN

# Just Fixing A Single Vulnerability Requires A Crazy Process And Takes Tons Of Time

Today, security teams need to coordinate with both IT and DevOps teams to fix each vulnerability, one at a time.

**Running around trying to resolve all these vulnerabilities is costing businesses big-time.**

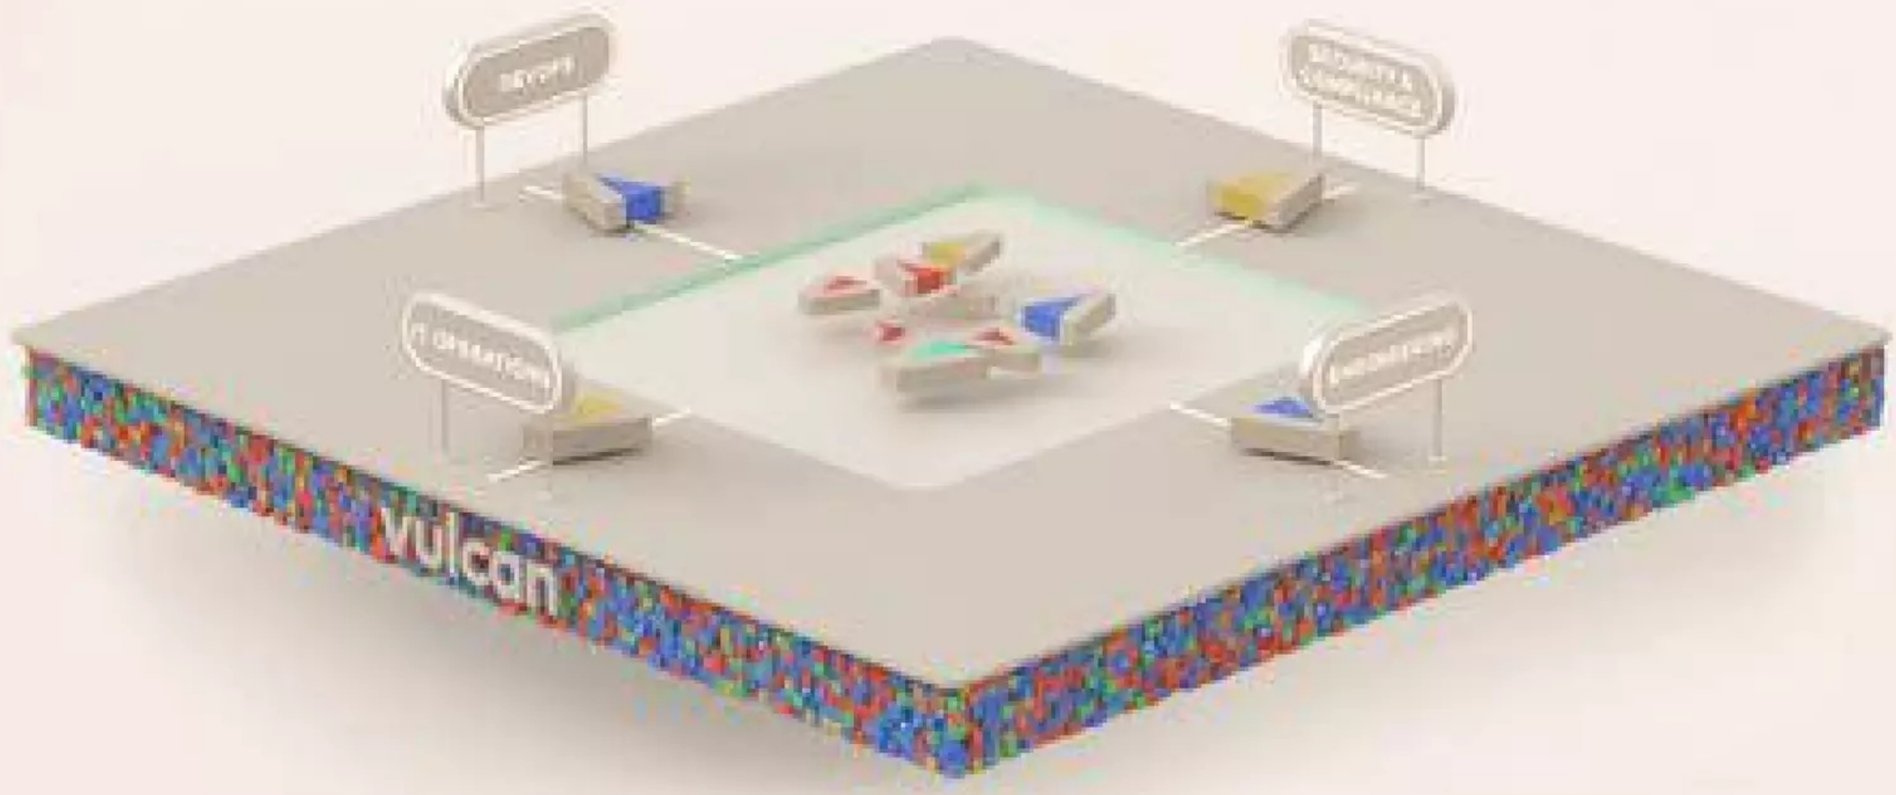

*" In 2019, companies spent 443 hours per week on average – or approximately ten full-time employees – managing the vulnerability response process"*

Ponemon INSTITUTE

Now imagine trying to fix thousands of vulnerabilities…

# Not Possible Until We Scale Remediation

## The Vulcan Cyber Vision

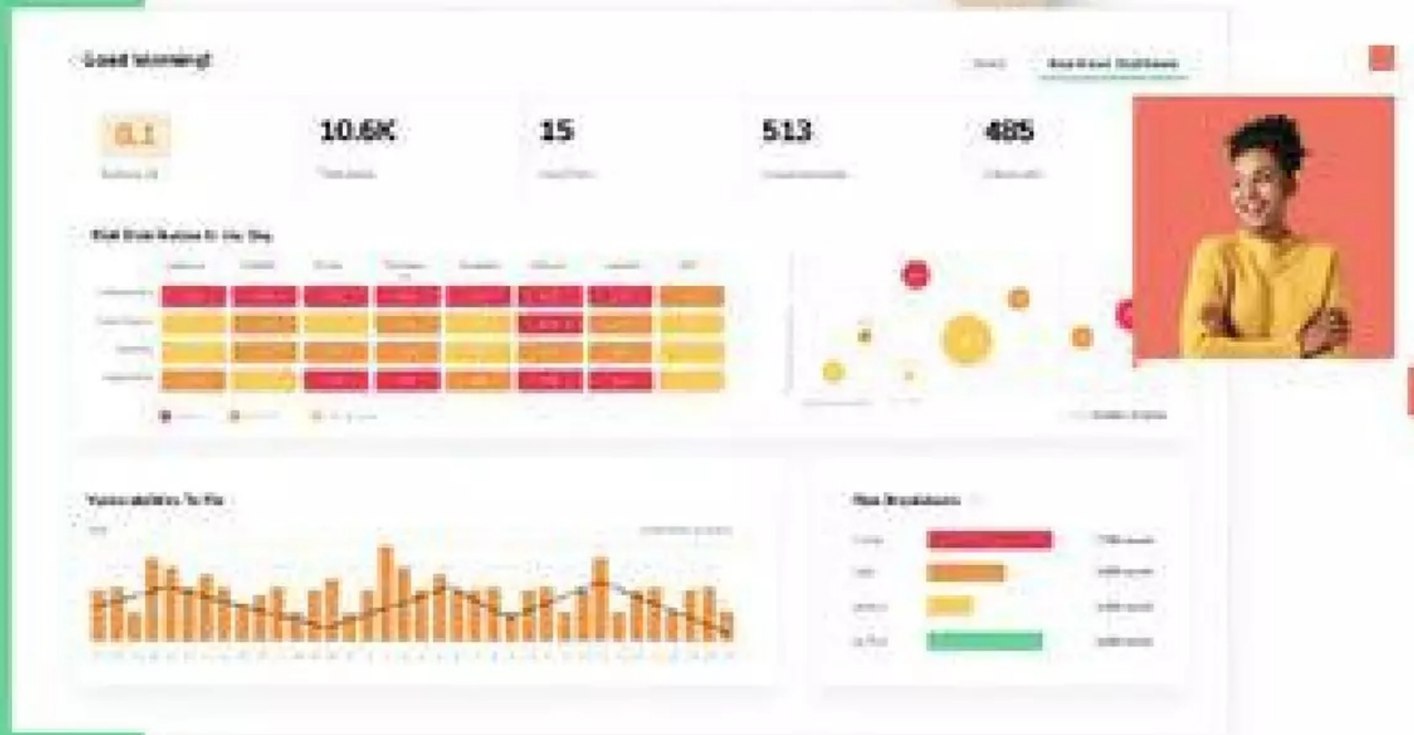

# Get Fix Done

# Remediation Orchestration by Vulcan Cyber

The vulnerability management platform built for **remediation.**

By orchestrating the entire remediation process from start to finish, Vulcan ensures that vulnerabilities aren't just found, they're fixed.

# Competitive Landscape

Remediation in words only, doesn't fix anything.
Remediation on paper is not actual remediation.

snowflake | **Use Case**

SNOWFLAKE USES VULCAN TO

# Get Fix Done.

## The Snowflake Challenge

- Teams didn't collaborate
- Scan data wasn't enough
- Vulnerability management needed SLA alignment

VULCAN

# Thank you!
