Documentation Underway
Dec 22, 2008 11:44 am - Sakai Administrator - I'm in the process of documenting the Blackboard Learning Environment Connector for Sakai and needed to capture some screenshots of the integration. Since we didn't have any recent demo announcements, I'm creating this one.

The author of this article presents a theory for why Malaysia Airlines had such an accident-prone last year based on Hofstede's cultural dimensions - specifically how Malaysia's high PD score (104) and low individual-collectivism score (26), could have negatively impacted the pilots' ability to operate in an emergency communications because the subordinate co-pilot was less willing to challenge the opinion of the pilot when he or she made a mistake. The author's argument is partially based on Malcolm Gladwell's book "Outliers" which argues that perhaps the biggest differentiator in aviation accidents aren't necessarily related with pilot experience, plane type or even the nature of the mistake itself -- it has to do with culture and how that affects communication with the two most important people sitting in the driver's seat. Gladwell and the author of the article reference Hofstede's work on cross-cultural communication and cultural dimensions theory which describes how much a company values authority and how much emphasis it places on the community. It provides the basis for how pilots operate in emergency communications and, why, now, a Malaysian carrier may have just been more prone to it than a British carrier.
The author concludes that Hofstede's dimensions aren't adequate to explain Malaysia's past flight performance or predict future performance, however, I still thought it was an interesting argument. I think the extent to which an aviation's company culture values authority, how much emphasis it places on the community, and its degree of uncertainty avoidance and desire to follow rules and structure could potentially impact flight crew performance, communication, and interpersonal dynamics.
This Theory May Explain Malaysia's Bad Luck With Plane Accidents in 2014
Is it a strange coincidence that all major fatal commercial crashes last year involved a Malaysian airline carrier? The answer could be rooted in an old cultural theory that looks at how pilots and first officers operate in emergency situations....
