Company Presentation Quinyx

QUINYX

RACKTOP

STORAGE THAT TRANSFORMS
SECURITY | COMPLIANCE | WORKFLOW

The Product

High-performance Software-Defined Storage (BrickStor) embedded with advanced security, encryption, and compliance that empowers both government and commercial organizations.

The Vision

To be the leader in Enterprise CyberConverged Data Security

The Company

- Established in 2010 in Fulton, MD
- Founders 20+ year NSA large data system veterans; proven team of data storage and cyber experts
- Hundreds of petabytes of data deployed across 3 countries
- Key verticals in Media and Entertainment, Government, Finance, Health Care, Life Sciences

PROBLEM

I.T. is Facing the Perfect Storm

DATA GROWTH is exploding at 50x through 2020

CYBER THREATS are projected to cost $6 trillion globally in 2021

REGULATORY COMPLIANCE costs $1.9 trillion annually

CYBERCONVERGED MARKET

Market Size & Opportunity by 2020

Data Storage

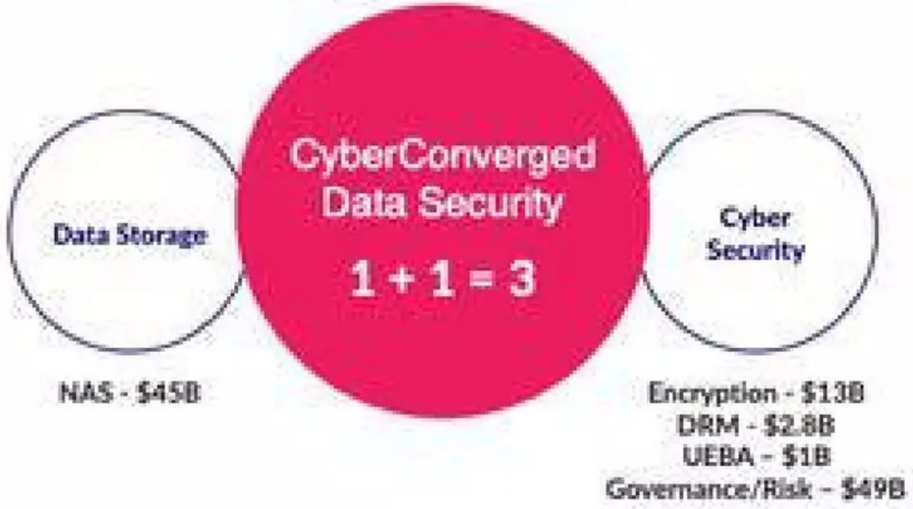

PROS
- Primary Budget – Funds Well Allocated
- Established Market Demand
- Plethora of Talent
- Must Have

CONS
- Dumb "Up the Stack"
- Not Inherently secure beyond rudimentary controls

Cyber Security Software

PROS
- Smart "Up the Stack"
- Established Market Need

CONS
- Secondary Budget
- Confusing
- Lack of Talent
- Add-ons/Nice to Haves

Unique Integrated Approach:
Protect Data on the Storage System, *not* just the Perimeter

RackTop's Version of Data Protection

Secure the data rather than the perimeter, says US Army CDO

For the Department of Defense and the U.S. Army, how to secure it precious, mission-critical military data is the name of the game. With high-profile data leaks and cyberattacks happening almost continuously, the traditional battlefield has extended into the internet.

The time-honored way of protecting data was at the hardware level, making sure that the hard drives or disks containing sensitive information were locked up in a secure area. That method is no longer adequate in today's hyperconnected world, where data is much more likely to be stored in the cloud.

"Adversaries are not stealing our networks; they're stealing the data on the network," said Thomas Sasala (pictured), director of the Army Architecture Integration Center and chief data officer at the U.S. Army. "So if the data isn't protected at the data level [instead of] at the perimeter level ... then we're not going to survive moving into the future."

Unified Approach

Bolt-on vs. Built-in

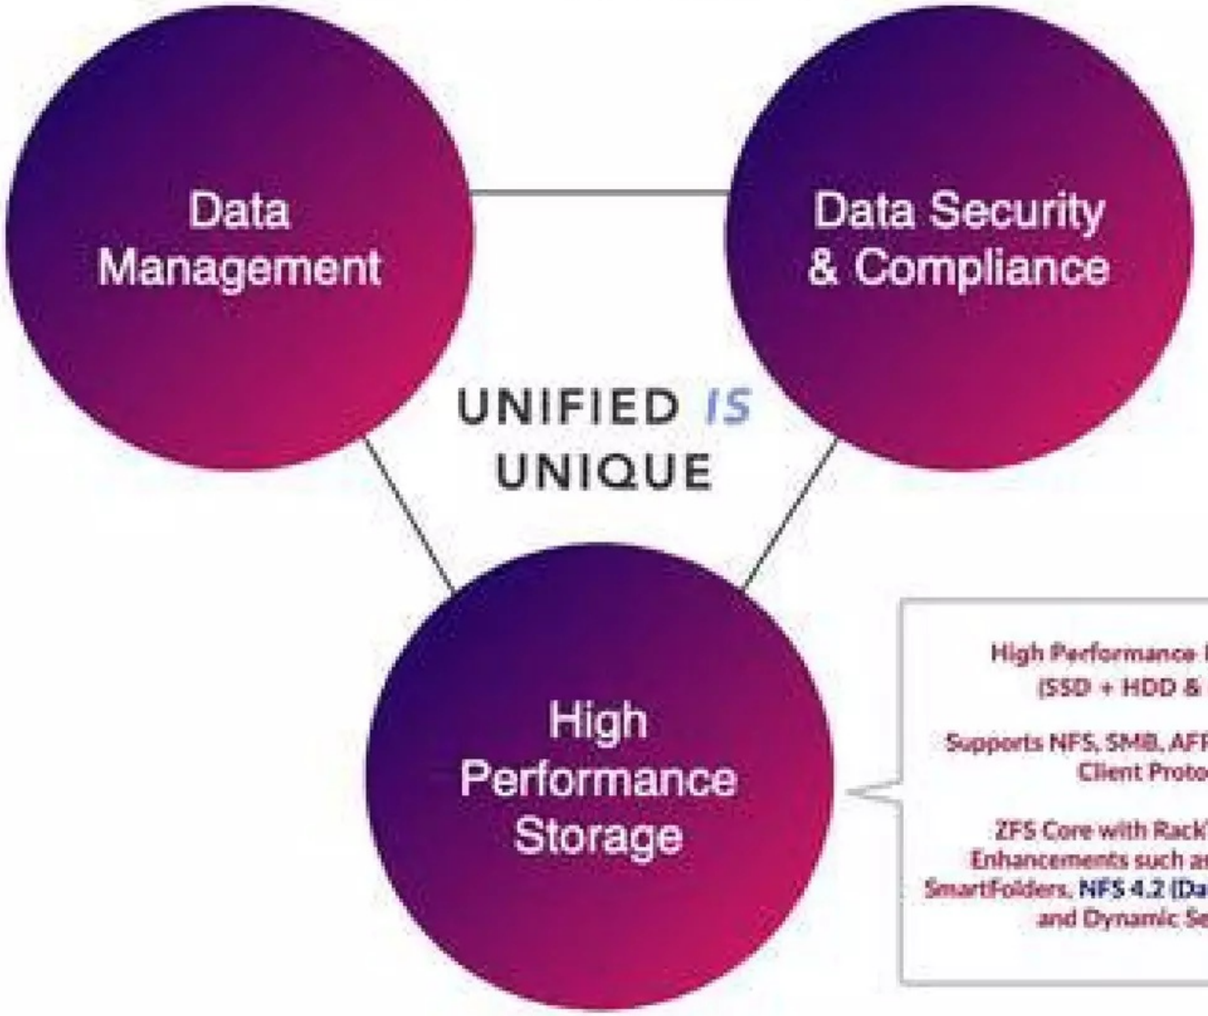

The Value

- 50-90% Lower TCO
- Continuous Compliance
- Embedded Security
- Defend, Mitigate, Stop Threats
- Faster to Implement
- Easier to Maintain

BRICKSTOR

Single Pane-of-Glass Management

Transparent Data Movement (to/from cloud)

Automated Policy Based Management and Performance Tuning

Integrated Policy Based Data Backup, Retention, and Replication

Multi-Layer Encryption with Key Management

Auditing, Immutability, and Ransomware Recovery

User Behavior Auditing and Analysis

Data Exposure and Risk Reporting

High Performance Hybrid NAS (SSD + HDD & NVME)

Supports NFS, SMB, AFP, Web and iSCSI Client Protocols

ZFS Core with RackTop Specific Enhancements such as xARC Cache, SmartFolders, NFS 4.2 (Data Security Labels) and Dynamic SendRecv

World's First Storage That Maps to the NIST Cyber Security Framework

- **Identify**
  - Data and Access (exposure) Reporting
- **Protect**
  - Access Controls
  - Content Access Controls
- **Detect**
  - End User Behavior Tracking
- **Respond**
  - File Immutability
  - Access Suspension
  - Data Swap
- **Recover**
  - Data Protection Policies
  - Data DVR
