SIMPOLIUM

One solution to bring an architectural site plan to life.

Problem

3D Modeling of complex, detailed urban areas is a very time-consuming process.

It requires high expertise.

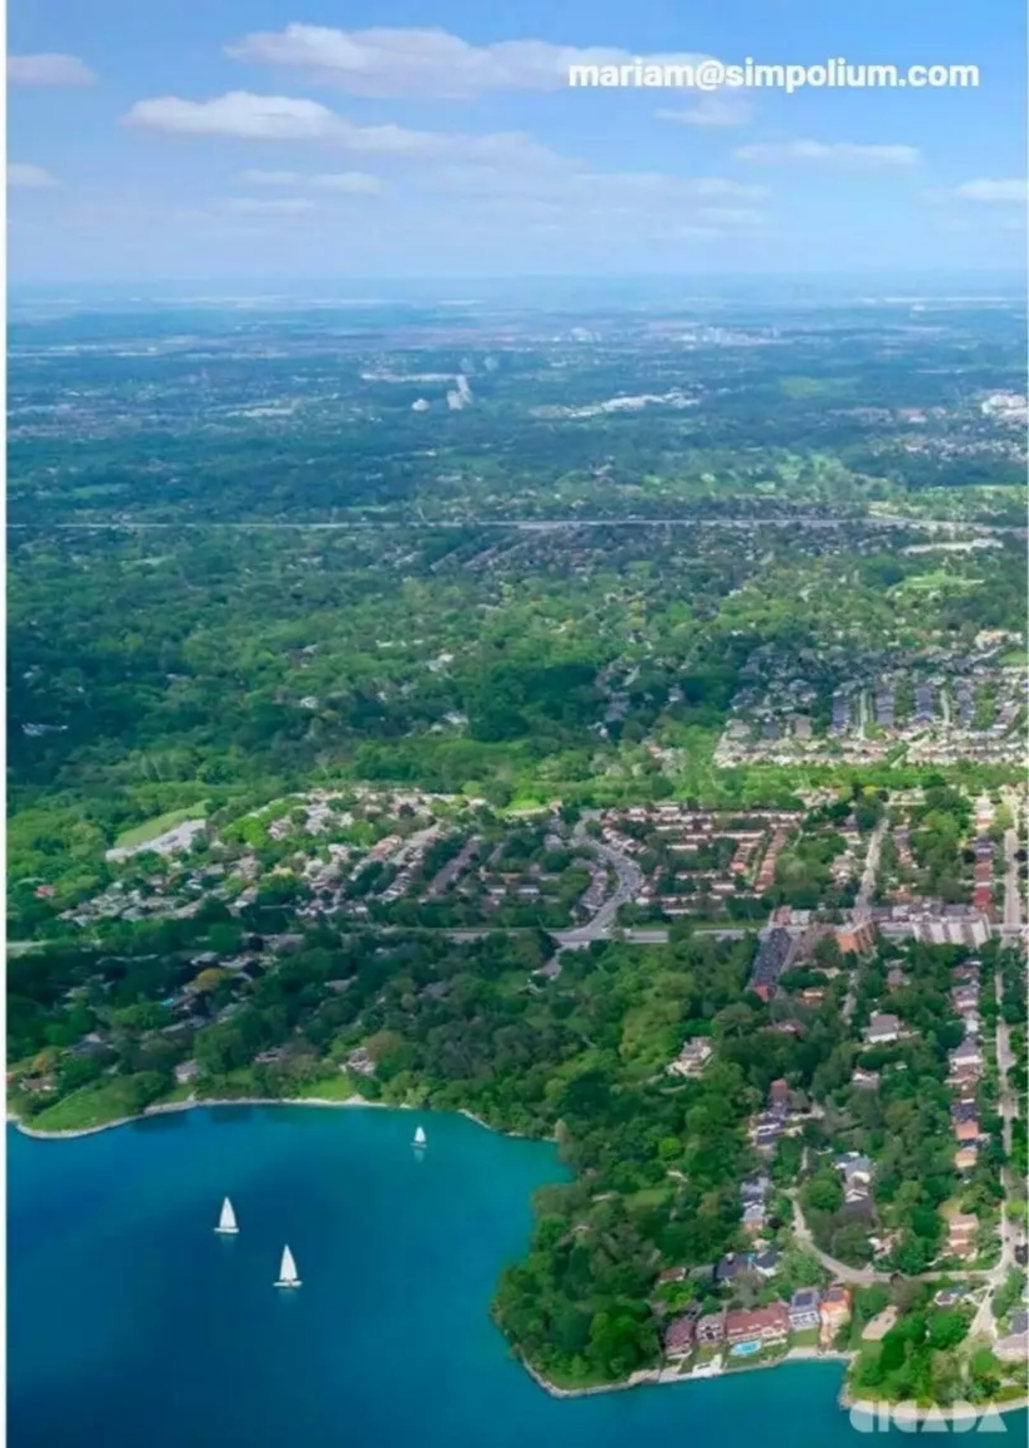

Changes to architectural projects often occur, which further complicates the workflow.

Solution

Cityscape Pro

A one 3ds Max plug-in for modeling urban areas.

Simplifies the working process and saves **40%** of production time in archviz and 3D animation industry.

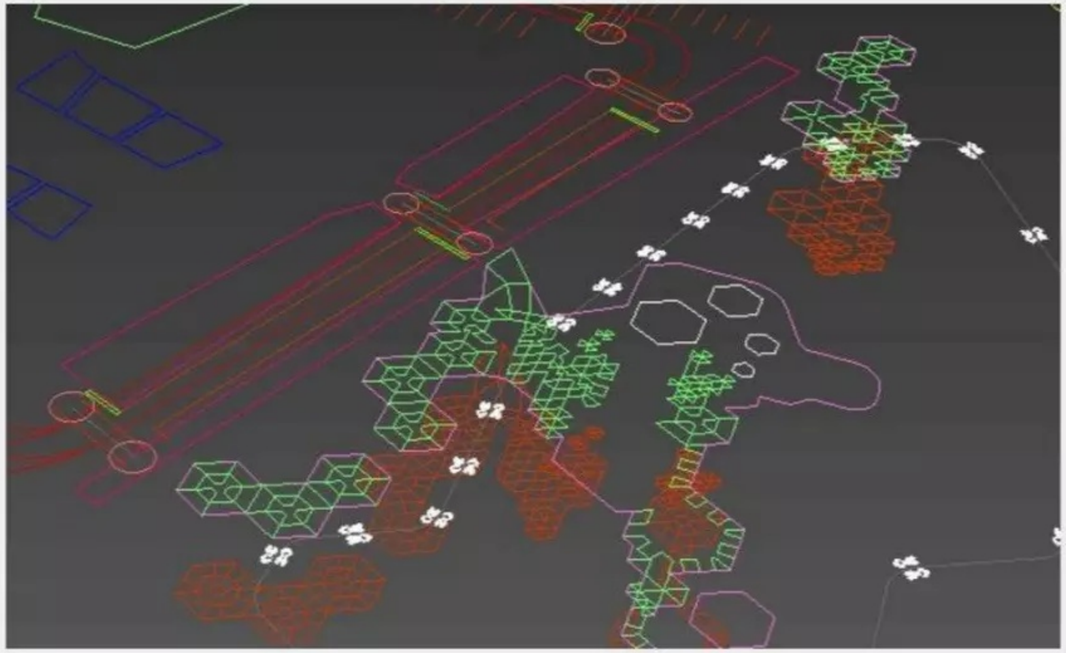

mariam@simpolium.com

How it works?

User passes two-dimensional outlines of the required zones to the Cityscape Pro.

The program processes these outlines and creates a realistic 3D landscape model.

Distribution

Our global target audience consists of three main categories:

- Medium to large architectural companies, with a separate Archviz Department.
- Architectural visualization companies working on high-end projects, 3D animations and VR.
- Freelancers working independently on small or medium-sized imaging projects.

Currently we support Autodesk 3ds Max. In the future, we plan to support SketchUp which covers additional 30M users.
