Web Security for Developers

Developers Must & Will Own Security

- Coders outnumber security people by est. 50-100x
  - In many cases (esp. small companies) security teams do not exist at all
- Security tools/vendors **extremely** not dev friendly
  - Compare any Dev/Ops Tools companies to Security Tools companies…
- Security tools operate outside the app
  - Whitelist policies are so hard to maintain they're oft unused or too open
  - Insight based on perimeter (eg HTTP, logs), app logic reverse-engineered

Why Now

- Problem Is Getting Worse
  - Dev velocity is increasing, making security audit “gates” not viable
  - Infra/Host Security is now owned by dev/ops, and is poorly handled
  - Unchecked Third Party code & domains account for >90% of application
- Developers are ready to take on Security
  - Increasingly writing Operable Software (via DevOps)
  - Security increasingly discussed in dev forums
  - Increasingly empowered to drive decisions (“The New Kingmakers”)

Snyk: Developer Oriented Security Tools Company

- Modeled after Dev-Friendly companies
  - New Relic, Github, Heroku, PagerDuty, Travis CI, Fastly…
- ~~Marketing~~ Dev Relations & Community Participation
- ~~Sales Team~~ “Pull” Model (self-serve try, use, buy)
- ~~Security Events~~ Developer Events
- ~~High Entry Price~~ Free & Scaling Prices

Third Party Code:
A Massive Security Problem

- Most of the code in today's web apps is 3rd party
  - Backend Modules, Front-end domains, Underlying host software…
- Third Party Code is vulnerable too & often not tested
  - Only 41% of reported vulns in open source are fixed, MTTR is 390 days
- Inventorying modules is hard; auditing is infeasible
- 3P domains are loaded dynamically, never tracked
  - And may be vulnerable, or malicious (e.g. malvertisements)

Founders

- **Guy Podjarny**

  Cyber work in Israel @ IDF (8200); Developed first WAF (AppShield) @Sanctum; created & led market leading DAST & SAST tools (AppScan) as Chief architect @Watchfire (sold to IBM), ; Founded Web Perf startup Blaze; sold to Akamai; CTO @Akamai for 3 years; ~18 patents in Security & Performance; Known speaker/blogger; Startup Investor/advisor

- **Danny Grander**

  CTO & Security Research Manager at Gita (acquired by Verint), a government/military cyber vendor; Lead dev in Collactive (social ranking startup) & Skybox (Security tools startup); Cyber work @ IDF (8200).

- **Assaf Hefetz**

  Led innovation group at Supercom, a digital identity company, including tech side of M&A activity; Researcher & developer in Skycure, a mobile security company; 6 years of Cyber work at Israeli Prime Minister Office (PMO); Completed his Computer Science degree at the age of 18.

Market Size

- Markets
  - Web Security: $2.5B, 5.7% CAGR
    - SaaS portion: $600M, 10.8% CAGR
  - App Vuln Assessment: $838M, 16.6% CAGR
  - Automated SW Quality: $1B, 14.9% CAGR
- Comparable Companies Valuations
  - APM: New Relic: $1.6B, AppDynamics >$1B
  - WAF: Imperva: $2.1B
