SportHold is a website where fans predict what they think will happen in upcoming sports games by entering what they think the final score will be.

49ers win - 24 to 17

We then take their predictions to form one super prediction for each game using a powerful law known as the Wisdom of Crowds. We then sell those predictions back to our users.

Last 4 Months...

6k
Signups

160k
Predictions

In the past 4 months (before July 29th, 2014) we've had 6k signups make 160k predictions. We use this data to make our super predictions.

How accurate are our super predictions? In sports betting, 52.4% is what you need to be profitable. 57% is what the pros aim for. We're at…

60.5%! That's a 3.5% edge over the pros in a $1 trillion a year market[1]

This isn't just sports, it's any field where better predictions have a bottom line impact.
e.g. Predicting key metrics like quarterly earnings for publicly traded stocks.

It can also be used within companies to predict key information important to operations.

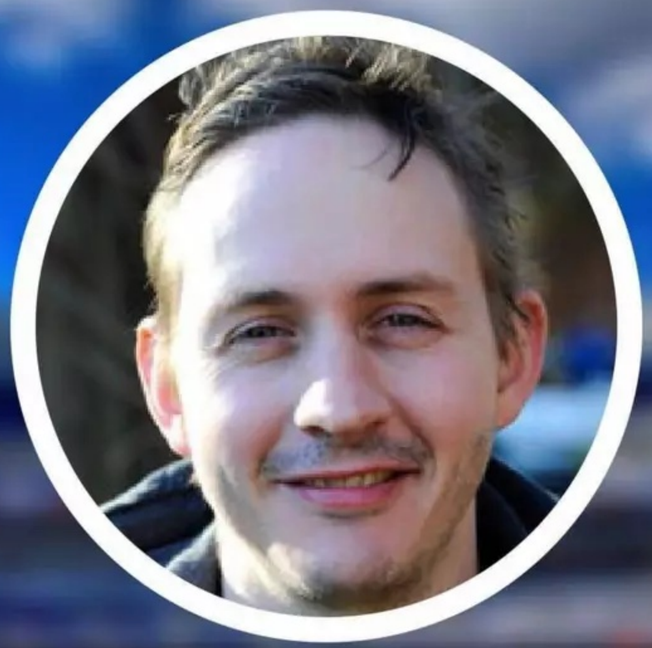

e.g Having employees across the company predict unit sales for the next 6 months.
