The Future of Secure Data Exchange™

May, 2021

Disclosure Statement

This presentation contains forward-looking statements within the meaning of the federal securities laws. All statements other than statements of historical fact included in this presentation are forward-looking statements. These statements relate to analyses and other information, which are based on forecasts of future results and estimates of amounts not yet determinable. These statements also relate to our future prospects, developments and business strategies. These forward-looking statements may be identified by the use of terms and phrases such as "anticipate," "believe," "could," "estimate," "expect," "intend," "may," "plan," "predict," "project," "target," "will" and similar terms and phrases, including references to assumptions. However, these words are not the exclusive means of identifying such statements. Although we believe that our plans, intentions and expectations reflected in or suggested by such forward-looking statements are reasonable, we cannot assure you that we will achieve those plans, intentions or expectations. All forward-looking statements are subject to risks and uncertainties that may cause actual results to differ materially from those that we expected or may prove unachievable.

Springcoin, Inc., dba "Spring Labs" ("Company") is an early stage company. Accordingly, Company has limited operating history on which to base an evaluation of its business or prospects or value of its assets. The Company's business and prospects must be considered in light of the risks, expenses and difficulties frequently encountered by companies at an early stage of development, particularly companies working with new and rapidly evolving technologies such as blockchain. These risks include, but are not limited to, an inability to create a viable product and risks related to issuance of tokens. Furthermore, the Company's business contemplates participation in highly regulated space of consumer finance and associated customer data and therefore may face regulatory and execution challenges, particularly in light of novelty of concept. The Company cannot assure you that it will succeed in addressing these risks, and our failure to do so could have a material adverse effect on our business, financial condition, results of operations and prospects. There can be no assurance as to whether or when (if ever) the Company will achieve profitability or liquidity. The forward-looking statements included in this presentation are made only as of the date hereof. We undertake no obligation to publicly update or revise any forward- looking statement as a result of new information, future events or otherwise, except as otherwise required by law.

All information contained herein is strictly confidential and for discussion purposes only. These materials may not be disclosed, in whole or in part, or summarized or otherwise referred to except as agreed in writing by Springcoin

Financial Data Sharing Models are Ripe for Transformation

The way data flows through financial services today needs to be updated to best service and protect consumers. Today, the majority of this data is gathered in two main ways:

Give-to-Get Models

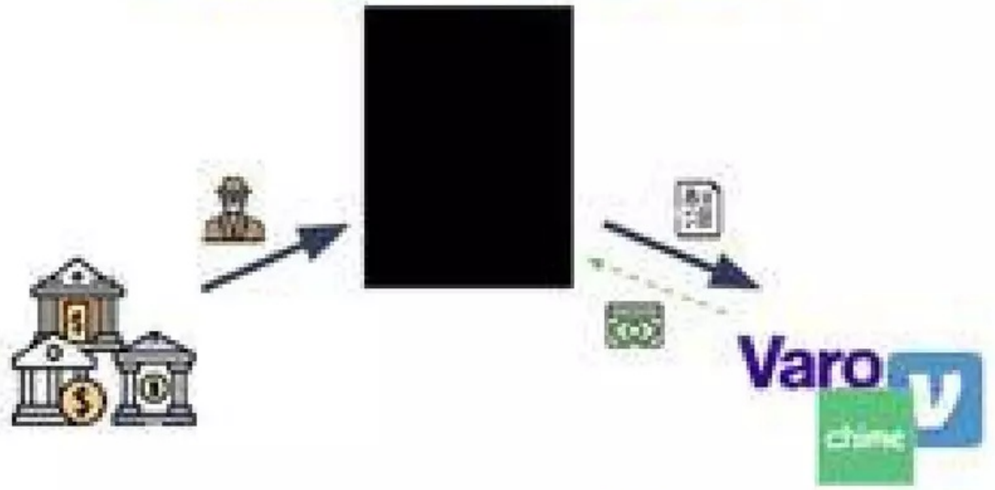

- Limited data shared
- Limited consumer control or view on what is shared about them
- Siloed data
- Centralization, leading to high infosecurity risk

>$85bn

[redacted]

Screen Scrapers & "Aggregators"

- High infosecurity risk
- Consumers don't know what data is shared => low trust
- No enterprise data monetization
- Siloed data

Example:

$13.4bn

[redacted]

And Frankly, Lots of Valuable Data Are Not Even Shared

These models exist for good reasons:

Competitive Sensitivities
Institutions are hesitant to participate and yield competitive advantage

Privacy & Data Control Concerns
Data sharing is not secure and data loss is rampant, the impact of which can be huge

Lack of Incentives to Contribute
Why share data if there's nothing in it for you?

In these models, the risks outweigh the benefits involved in the exchange of proprietary industry data. This leads to silos of valuable data owned by enterprises - but that ought to be securely shared!

Spring Labs

Our Vision: A Marketplace for Better Data Sharing

We have built the technology that enables institutions to finally access valuable, siloed data - a protocol allowing a **direct and secure information exchange.**

Real incentives to share, enabling access to previously unavailable data

No active middle-man, a direct exchange between participants

Greater security and data ownership controls: share information without sharing underlying data

Broad participation (financial institutions, insurance, payroll, social media, etc.)

Spring Labs

Spring Protocol and Use Cases

TECHNOLOGY

Spring Protocol

Innovative technology layer for modular data security and sharing properties.
Partners feel safer sharing when ownership and anonymity can be guaranteed in code.

Trustless & Deterministic

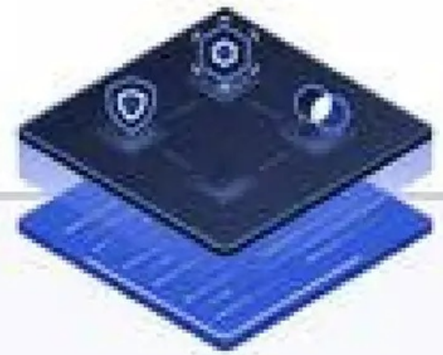

Data Agnostic

Graph Analysis Enabled

Flexible Entity Resolution

USE CASES

Data Sharing Products

Valuable data sharing tools built on top of the Spring Protocol.
products leverage the technology's unique properties to deliver immediate value

PACE Network

MainNet

Crypto Middleware

Spring Index

Spring Labs

Initial Use Cases

With real-time access to previously unavailable information using the Spring Protocol, we built unique products:

PACE Network

Detecting loan stacking in the PACE industry

Live

Differentiation

- Loan information shared with peers in real-time
- 100% industry coverage

[redacted]

MainNet

Fraud and income data sharing, income stability data

Live

Differentiation

- Fraud and income fields from peers
- Rich alternative and predictive data on borrowers

[redacted]

Crypto Middleware

Verify Identity, AML/KYC, and Synthetic-Identity Detection

In Development

Differentiation

- Bridging off-chain and on-chain ecosystems to open up many new financial services to the digital asset world
- Add credit history and identity to a blockchain to be accessed through smart contracts to meet evolving KYC/AML regulations and to open up new financial products

Coming Q3 2021

Spring Index

Tokenized black/white lists sharing between competitive parties

Early Development

Differentiation

- Allow trusted circle of actors to share sensitive threat data

Coming Q4 2021

* Companies obfuscated
