

Gitpod

Dev Environments as Code for Professional Dev Teams

The Missing Piece in Modern DevOps Pipelines

Sven Efftinge (Co-Founder & CEO)

sven@gitpod.io

Confidential

Every week ...

> “Software engineers spend **3.7 hours waiting for tests** [...], **3.5 hours waiting for builds** [...], and **2.7 hours on dev environment** management.[1]”

Problem

It is 2020 and developers still

- **Manually manage** their dev environments on local machines and
- **Wait for builds and tests to complete** before coding.

Solution

- **Describe** dev environments as code.
- **Automate** the provisioning of dev environments.
- Continuously prepare **ephemeral dev environments**.

  Think CI/CD applied to dev environments.

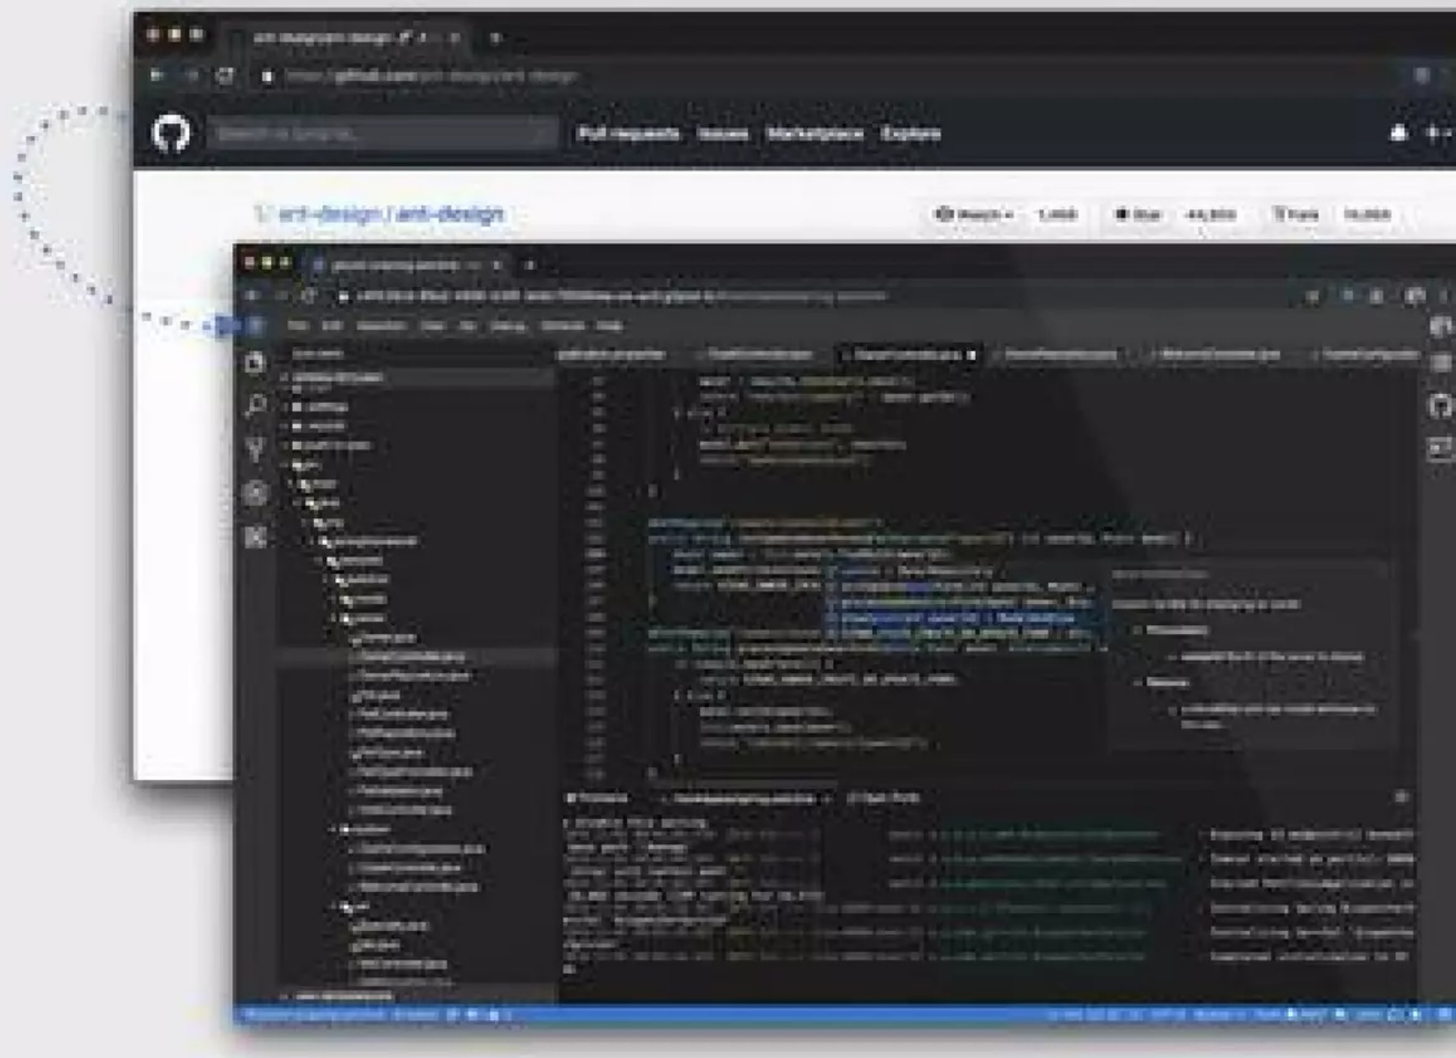

Demo

Try it out yourself.

Open in Gitpod

Or go to any GitHub or GitLab project and prefix the URL with **gitpod.io/#**

Independent Platform

We have founded Theia,
a Microsoft-neutral, fully-featured VS Code alternative, developed in open-source and **natively supporting VS Code extensions.**

THEIA

Open-source Cloud & Desktop IDE

- > 100 code contributors
- VS Code extension compatible
- > 11k stars on GitHub

Contributors & Adopters

Google Cloud
Official Editor of Google Cloud Shell

SAP
Replace old Web IDE (>30k active user in production)

Arduino
Replace existing IDE (>10M downloads)

And more ... Eclipse redhat arm IBM

Timing

Why Now?

New Generation of Browser IDEs

We can finally run all the tools developers love and use on professional software projects in a browser.

Container and VM Technology Advance

The industry's focus on cloud has matured the container and VM tech landscape, which means that secure, fast and scalable cloud solutions have become practical.

DevOps

Development teams are automating their pipeline. Integrating the dev environment completes the story.

Complexity Increases

Big complex polyglot projects comprised of many microservices are the norm. Setting up and managing dev environments becomes more challenging.

Remote Development

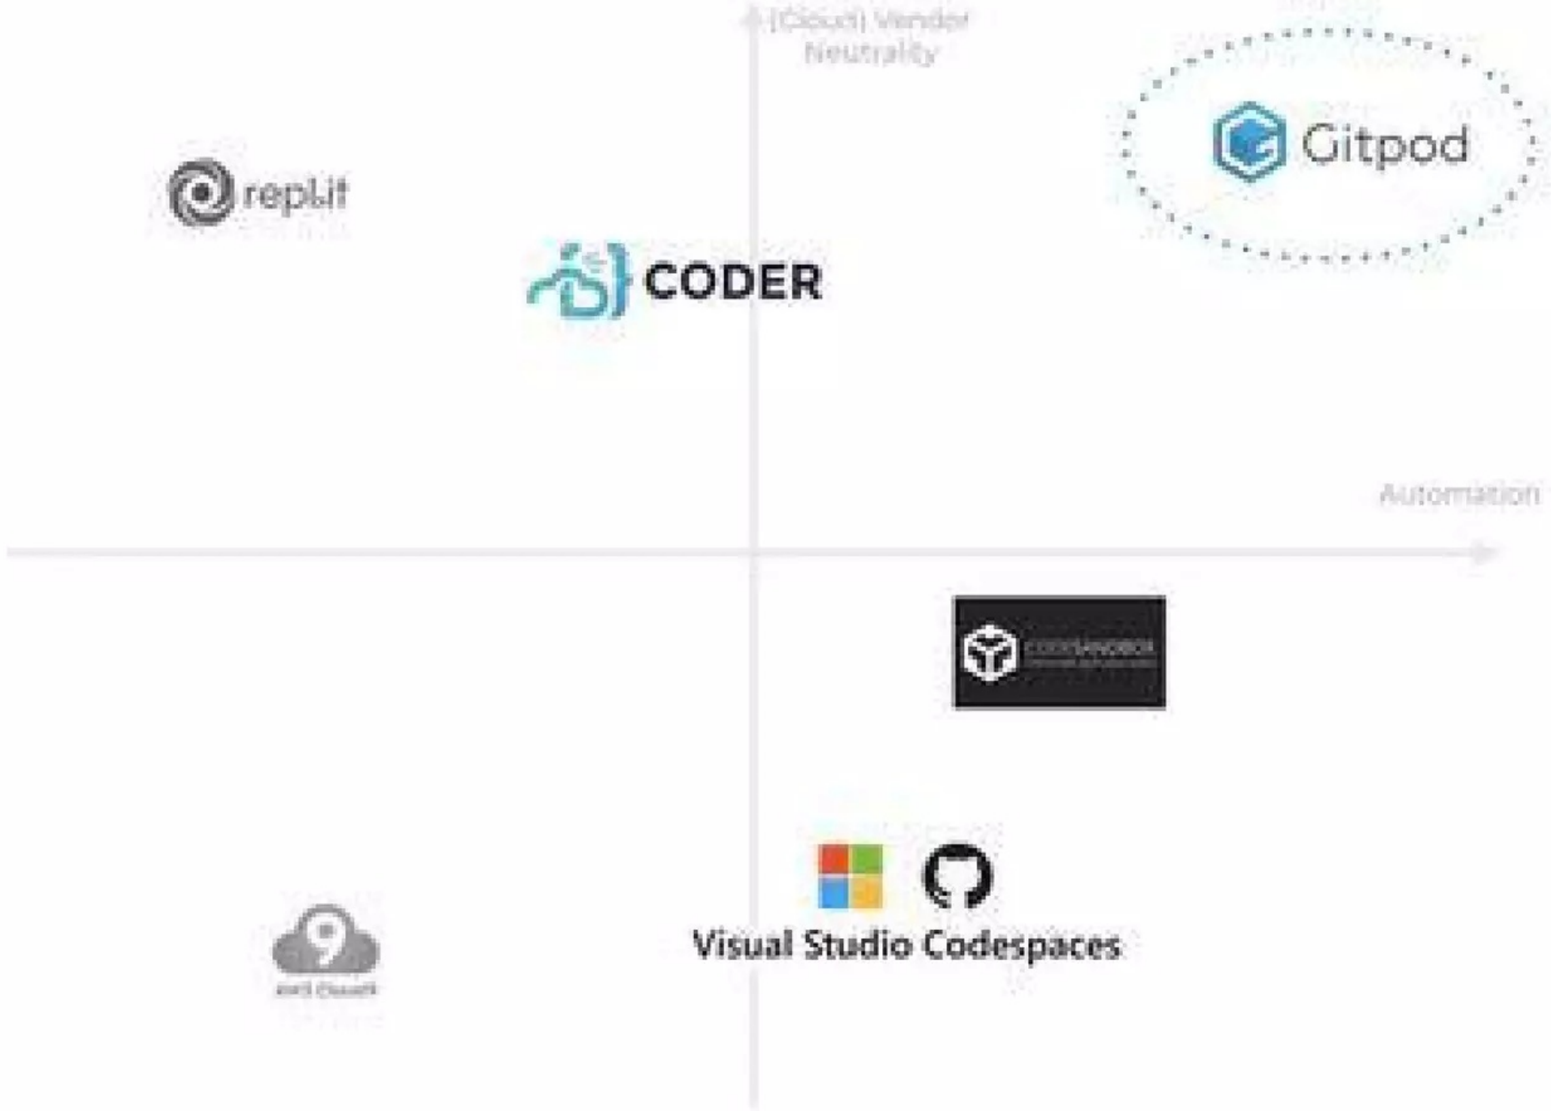

Covid-19 accelerates the trend to remote work and remote software development and collaboration. This is adopted by companies large and small.

Competition

Dev Environments as Code Landscape

We have always been **relentless about automating** as much as possible of developers tool stacks. To truly enable frictionless development, **workspaces need to be ephemeral and disposable**.

This is why we **invented prebuilds.**

Open Core

SaaS + Self-Hosted

Building **open source communities is in our DNA**.

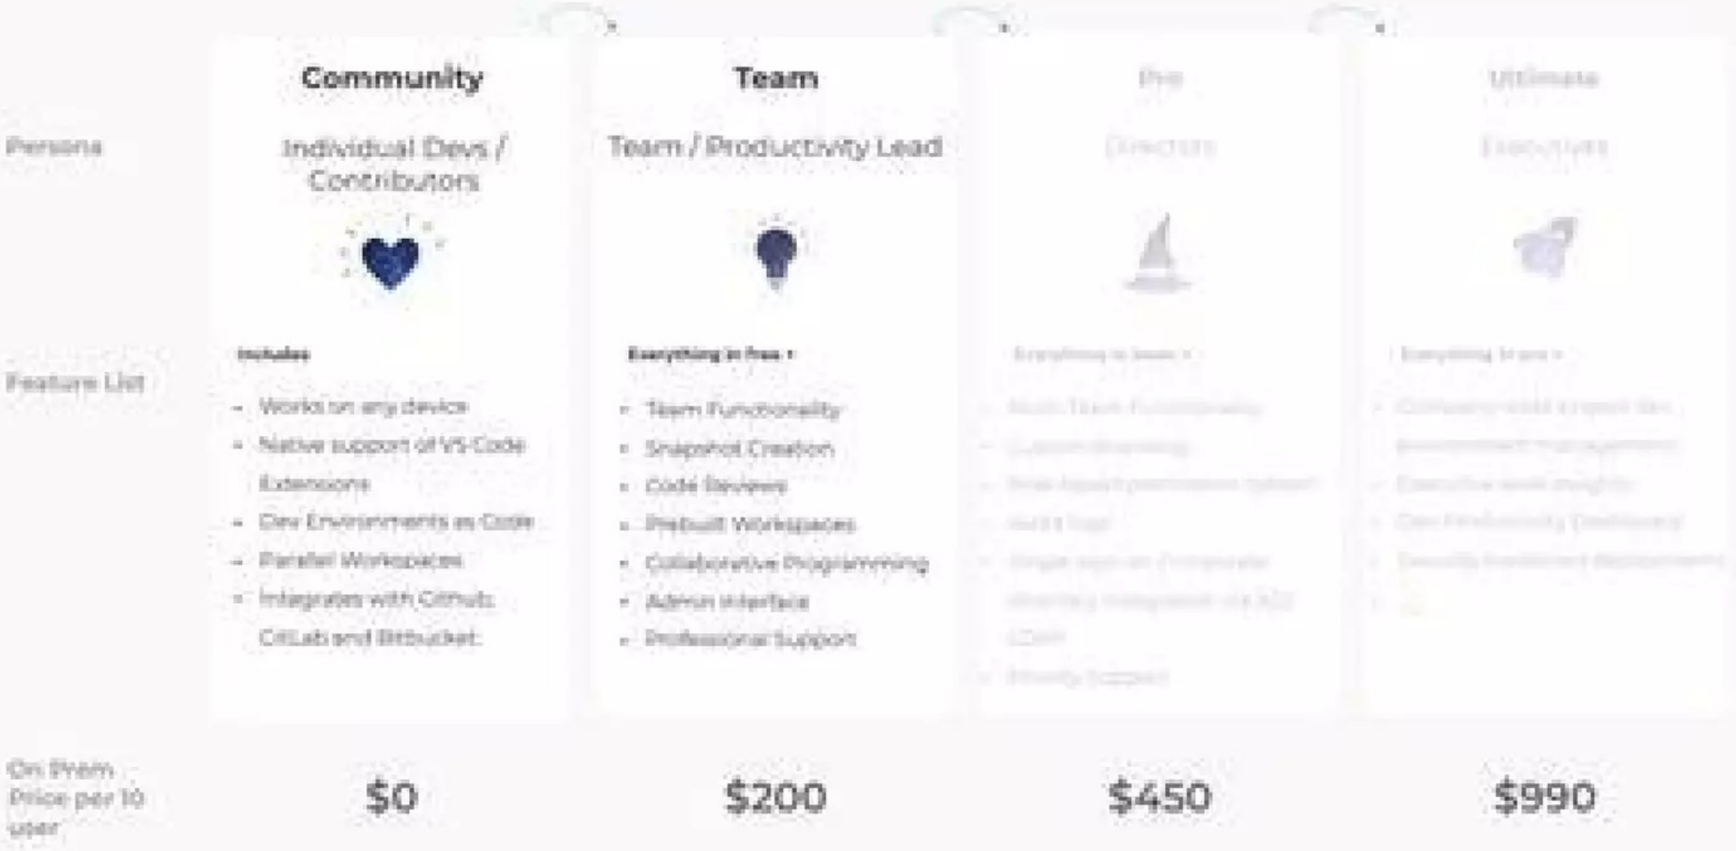

To do justice to our first mover position and fully deliver on the **dev environments as code paradigm**, we will open source Gitpod under an AGPL license end of July.

Distribution partnerships
