The medical malpractice system is broken

Medical errors are currently the **third leading cause of death** in the US and often lead to the financial ruin of those who survive them. The medical malpractice system exists to ease the lives of those afflicted and to decrease mistakes by doctors and hospitals—but this industry has one of the least credible reputations because frivolous cases often receive awards while many meritorious cases receive nothing.

Most medical malpractice claims are never heard

María González
43 years old
Lives in California
High school graduate
$43,000 salary
Mother of 3 kids

Maria was born with a small malformation in her right ankle. Despite some chronic pain symptoms, she had learned to adjust and was able to live with the pain.

After temporarily experiencing more severe symptoms, she was instructed by a doctor to do a simple surgical procedure to correct the malformation. The idea of a more comfortable life brought her hope, and agreed to the operation.

What should have been a simple procedure turned into a nightmare. The doctor made a mistake during the surgery and as a result, Maria's ankle deteriorated significantly and she started to walk with a limp.

As her medical bills piled up from the doctor's mistake, she tried to sue the responsible doctor. Unfortunately, no law firm was willing to take on the claim because it's value was not significant enough. Valued at around $150,000, the incident did not cause her to lose her job or result in major economic damages.

Although she was still able to work, she had to give up doing many things that brought her joy. Maria was no longer able to play with her children in the park, walk her dog, or even tidy up her home the way she would have liked to.

Problems

Lack of transparency

Victims with valid claims don't know how to compare attorneys, which often results in representation by attorneys who are suboptimal for their specific type of medical malpractice claim

False negative claims

Over 60% of potential medical malpractice claims are rejected by the plaintiff's lawyer not because they lack merit, but simply because they are not profitable enough

Justpoint's solution

We created an **AI platform to match valid claims with the best law firms to represent them** by (1) decreasing the cost and time of analyzing the merits and likely payout of a claim, and (2) analyzing law firms based on their performance regarding each type of claim.

Justpoint

Why now

Due to the recent increase on the volume of medical record to review, law firms may spend over **75% of their time** analyzing the merits and value of claims

Over **95%** of patient data is now digitized

Deep learning, NLP, and OCR technology drastically improved over the last 5 years

Thesis

Over the next years, **AI will be used to make the most important decisions in medical malpractice cases**. This will reduce personnel cost, improve the prediction of lawsuit values and the assessment of merits, and expedite financial settlements. The market share of law firms, insurers, and hospitals will be redefined in no small part by which players adopt AI. As a consequence, the AI company which accumulates the most data will become the market-defining company in this space.

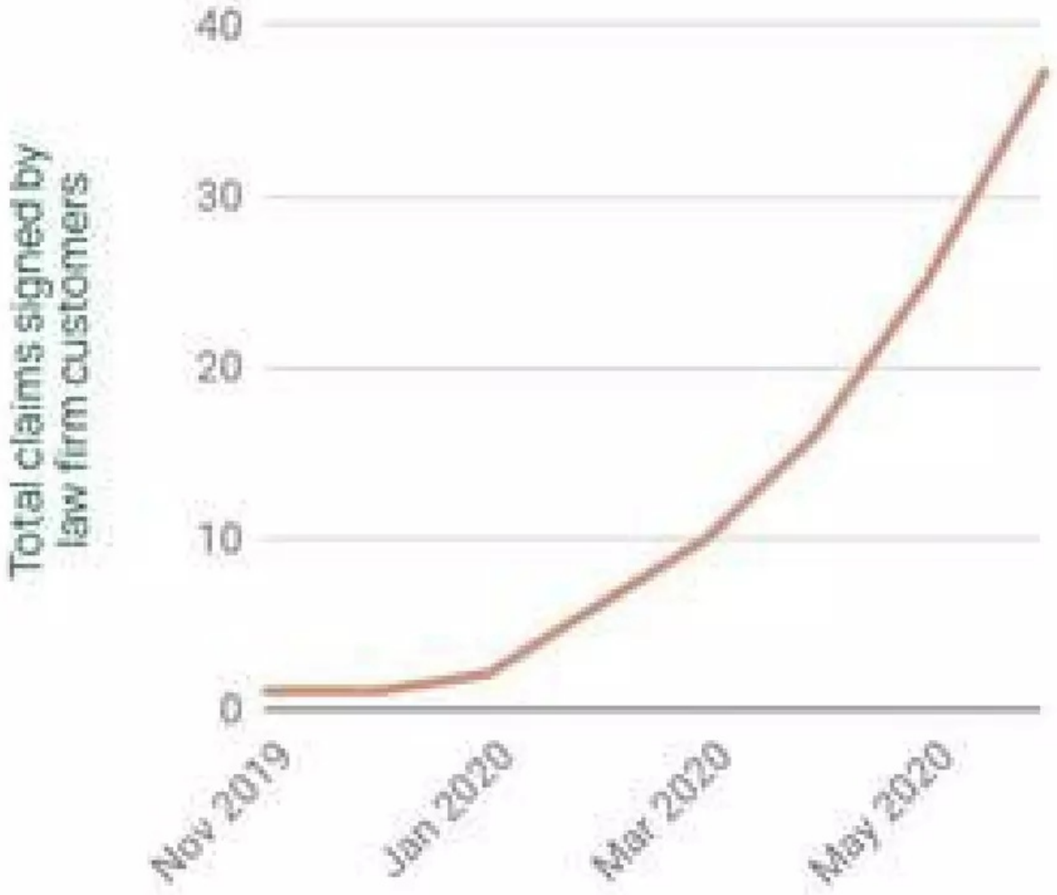

Our first product

An AI-platform that matches the valid claims with the most appropriate law firms

1st	Plaintiff		Provides claim details on **justpoint.com**
2nd	Matching Attorney (our client)		The Matching Attorney uses our platform to analyze the **merits** and **estimate the settlement** value of their case ~100X faster
3rd	Retaining Attorney		**Using analytics from our platform**, the Matching Attorney connects claimant's with the best law firm for their specific claim, choosing from over 700 law firms, and subsequently receives a percentage of attorney fees as co-counsel.

Justpoint

Over 30% MoM growth on plaintiffs matched

Updated on: Jun 1, 2020

Market size

A large beachhead market with significant future growth potential

Justpoint

Building the largest medical malpractice database

Medical malpractice provides the best access to high quality, labeled healthcare data

...allows us to obtain more data from website claim submissions and **data partnerships with law firms**

...allows us to improve existing **AI models** and create new ones
