More than 28k people on the waitlist (as of August) up from 10k in May

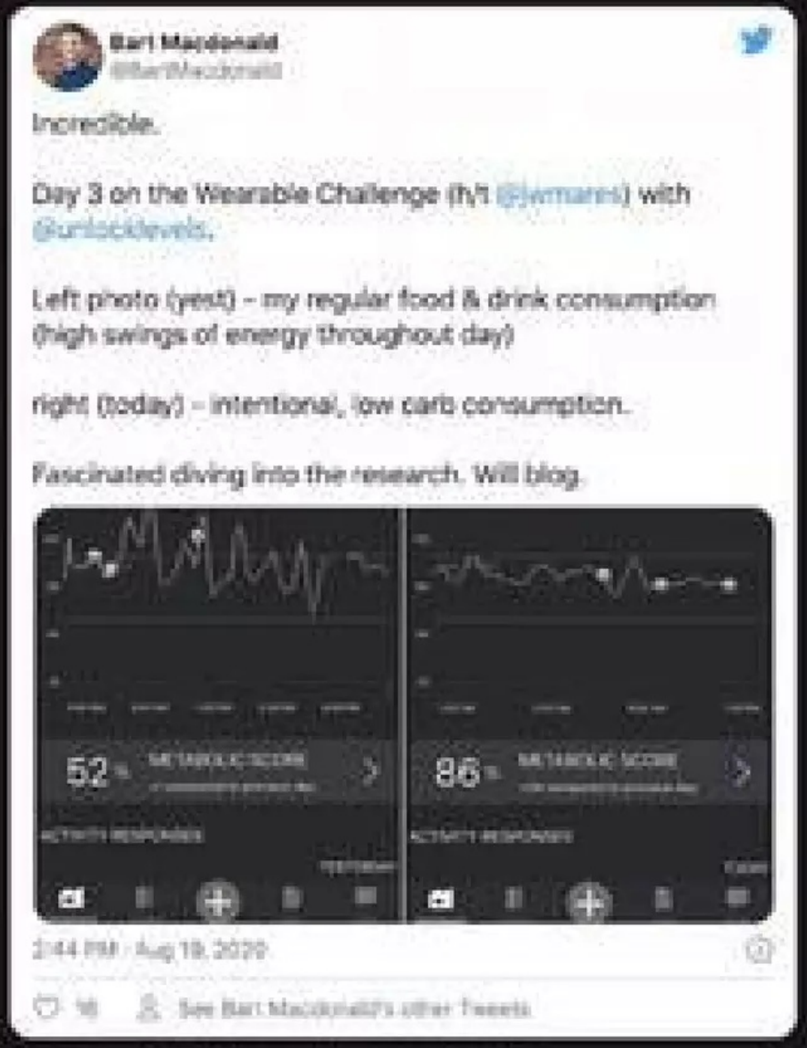

Customers are seeing results, and the content is inherently social

Glucose sheets up when working out after fasting. So cool to track this with
LEVELS

Aymul
Look what a potato did to my blood sugar. It's not @unlocklevels fault they told me about it. If anything, all this damn knowledge helped me to lose 20lbs. Geez...

@unlocklevels is one of the coolest consumer health products I've seen.
It gives you real-time feedback on how your body responds to specific foods.
Metabolic health is an interesting space to watch ++.

LEVELS
@unlocklevels is amazing. Totally changed my diet after I started using them. Haven't had pizza in a while...

Kaya Thomas
@kthomas901
Knowing my family's history with metabolic conditions inspired me to do the @unlocklevels program.
I'm happy that I mostly stayed in optimal glucose range! Cheesecake caused my worst day.
I hope one day more folks have access to learn about their metabolic health like this!

Levels is the logical extension of the modern health stack

Sleep

Diet

Exercise

Levels is already recognized as a key part of the modern health stack

Levels brings metabolic awareness to a new market

Continuous glucose monitoring technology has only been available for diabetic individuals, and we're bringing that technology to the much larger market of healthy people who want to improve their lives.

$600B - Expected medical costs attributable to metabolic dysfunction by 2030

$536B - Preventive and personalized wellness spending.

$58B - Wearables market

$51.5B - Global blood testing market

Establish brand leadership with high-margin biohacker-types and move down market later

2020

- Biohackers
- Executive athletes
- Longevity obsessives
- Data nerds

2021

- Mainstream fitness (CrossFit, Equinox, etc)
- Whole Foods shopper
- Baby Boomers

2022+

- Mainstream health and wellness
- Curious about personalized diet

Next-generation hardware will be substantially less expensive, giving us access to bigger markets.

2020 product focus has been on the 1-month program, and 2021 focus is on membership model

Current program is positioned as a one month program for $399; if customer wants to subscribe, we offer a subscription at $199/mo after that.

Subscription rate is between 10% and 20%, depending on the demographic, and it's not something we're actively pushing.

There are many features that make the app more useful as a subscription product (leaderboards, social, competition), but given limited bandwidth, those features are not our current focus.

SEO and content strategy is building steam

The Levels Blog is widely recognized as the best source of information on metabolic health and our SEO strategy is working.

Organic search share of total traffic

- April 2020: 5.2% (664 total visitors)
- May 2020: 6.7% (1,453 total visitors)
- June 2020: 12.8% (3,909 total visitors)
- July 2020: 23.9% (10,341 total visitors)

Your blog is pure gold, it's almost the best possible marketing for your service! The experience of reading it is like reading a science paper that has been stripped down to an easily digestible summary.

Raising $5M-$8M in order to:

Kick off clinical research this quarter

Build the team

Build a deterministic marketing funnel

Get to profitability

Give us enough runway to next generation hardware integration
