

All your data in one place

The Problem: Centralizing data

From Operational Systems → **To** Modern Data Warehouses → **For**

The Problem:

Traditional approaches to ETL are too labor-intensive and brittle

1. API Call
2. Design Schema
3. Write CSV
4. Prepare Destination
5. Load
6. SQL Merge

The Solution:
Prebuilt automated connectors

Automated

Fivetran creates and maintains a perfect replica of your data, with minimal user intervention.

Resilient

Idempotent core architecture makes Fivetran resilient and makes it possible for devs all over the world to write high-quality connectors.

Deployed in the cloud

Our engineers are constantly monitoring and fixing our code as the sources change.

The Solution:
The simplest possible user experience

1. Authorize connection

2. Choose tables

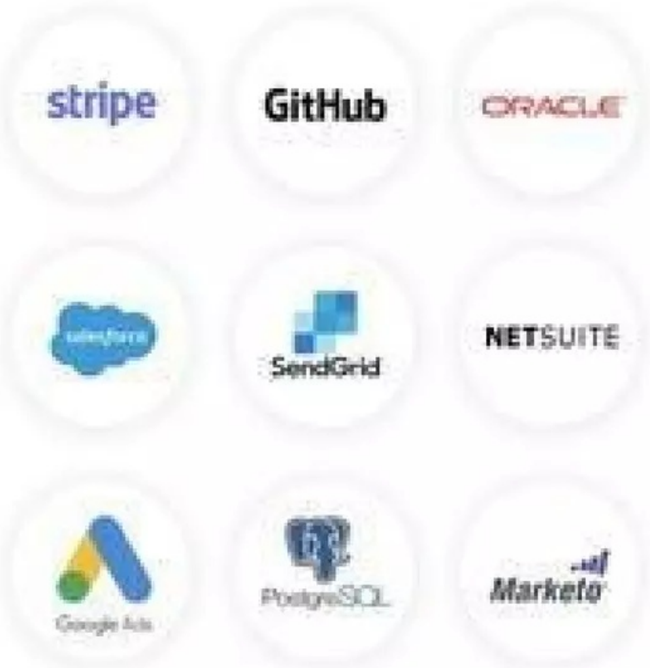

Competitive landscape

We believe **automation** is the key to becoming the infrastructure powering all analytics and data projects.

Why now?

Proliferation and Adoption of SAAS Tools → New Generation of Cloud-based, Serverless Data Warehouses → Leveraging Data is a Requirement to be Competitive

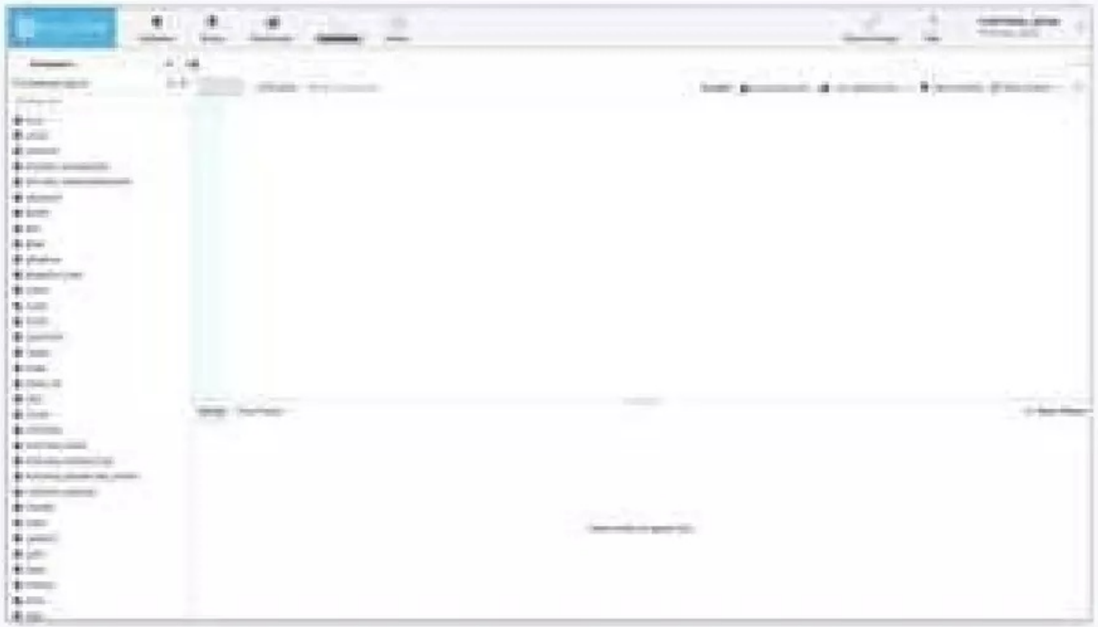

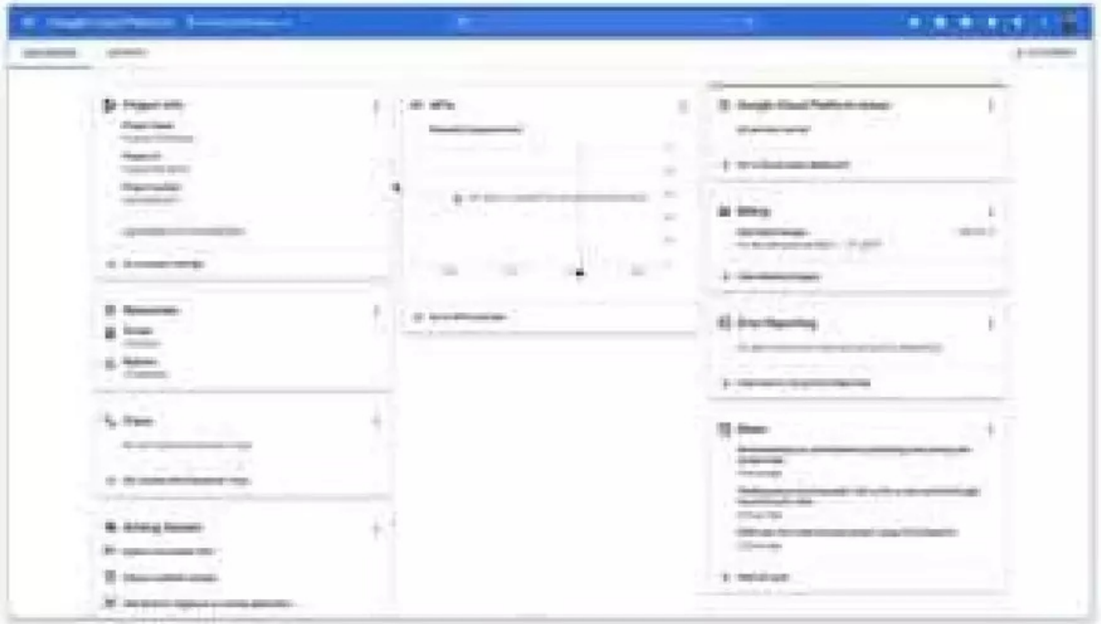

Validation:

Direct integration within partner's UI

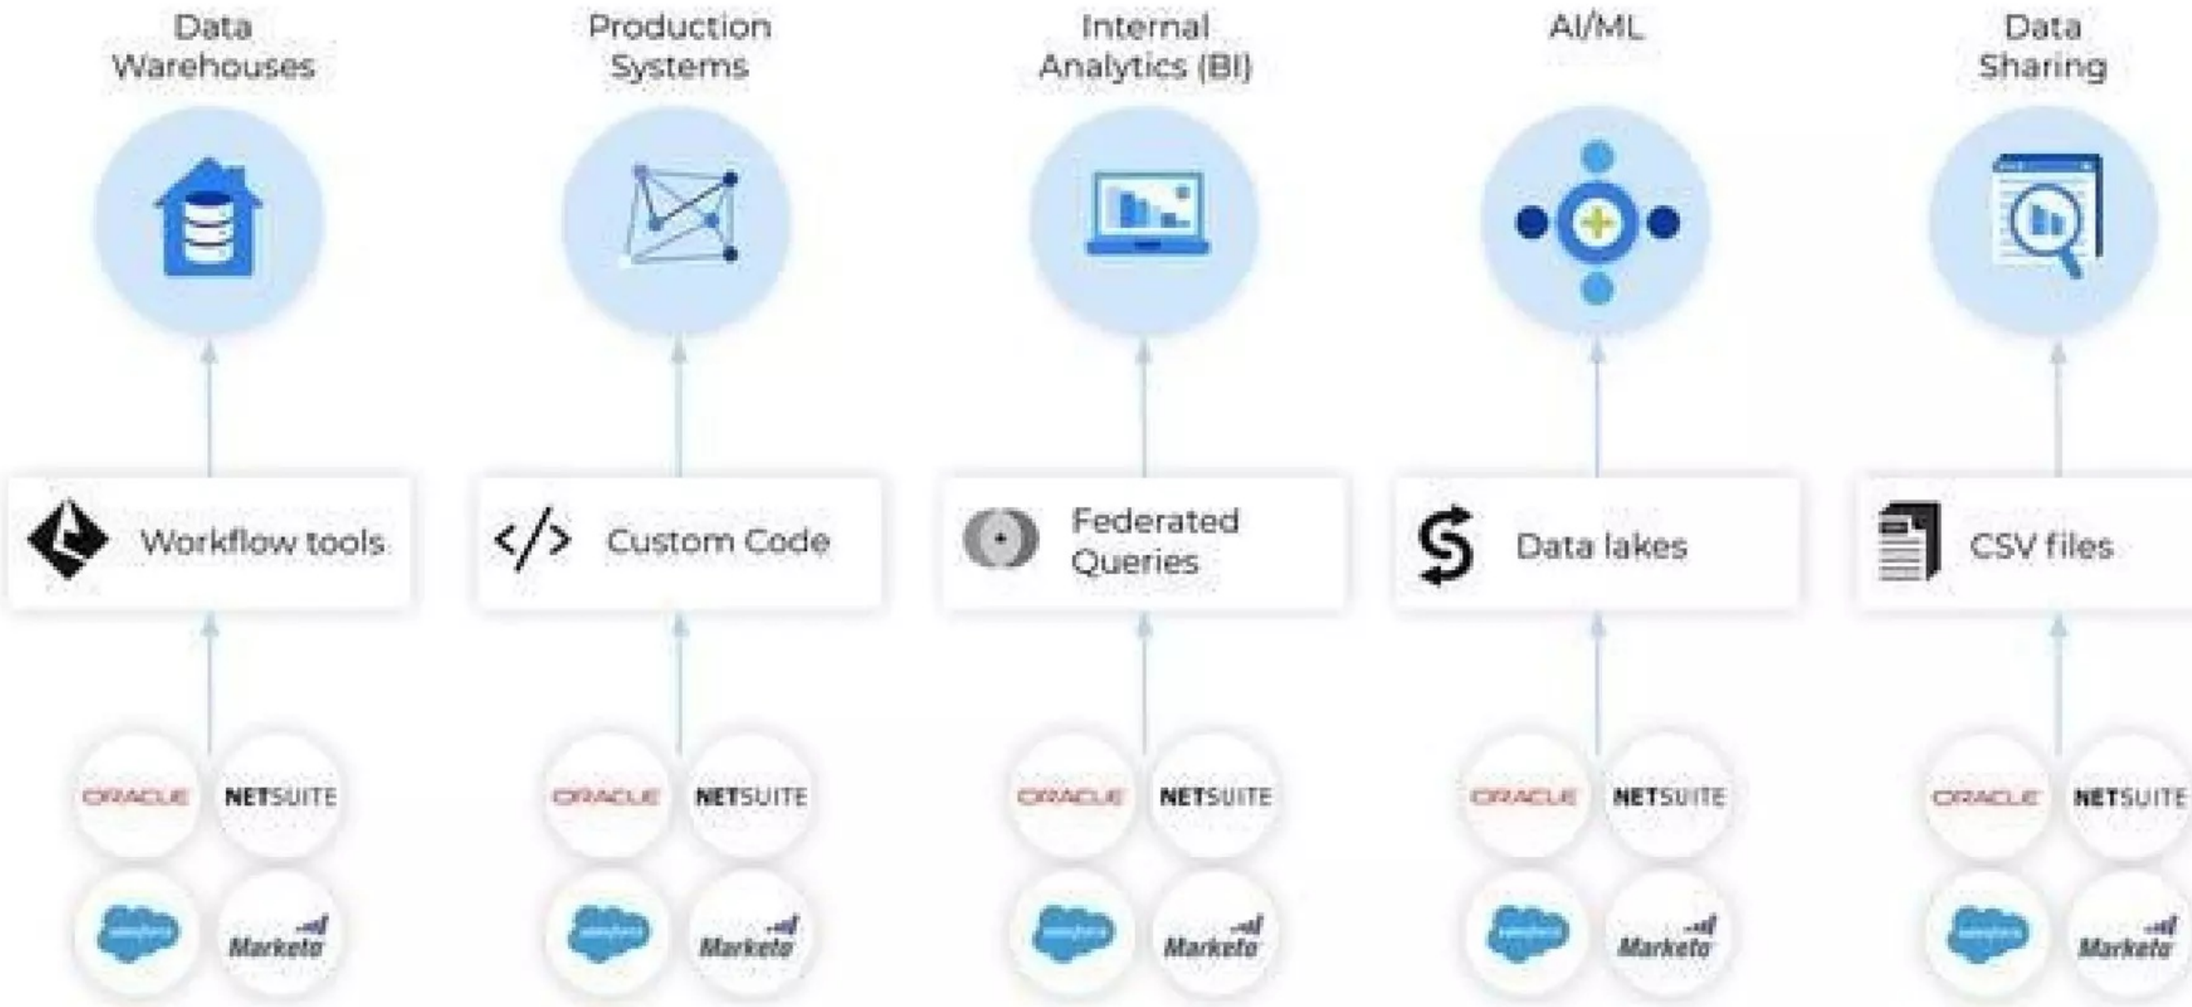

Snowflake: Partner Connect

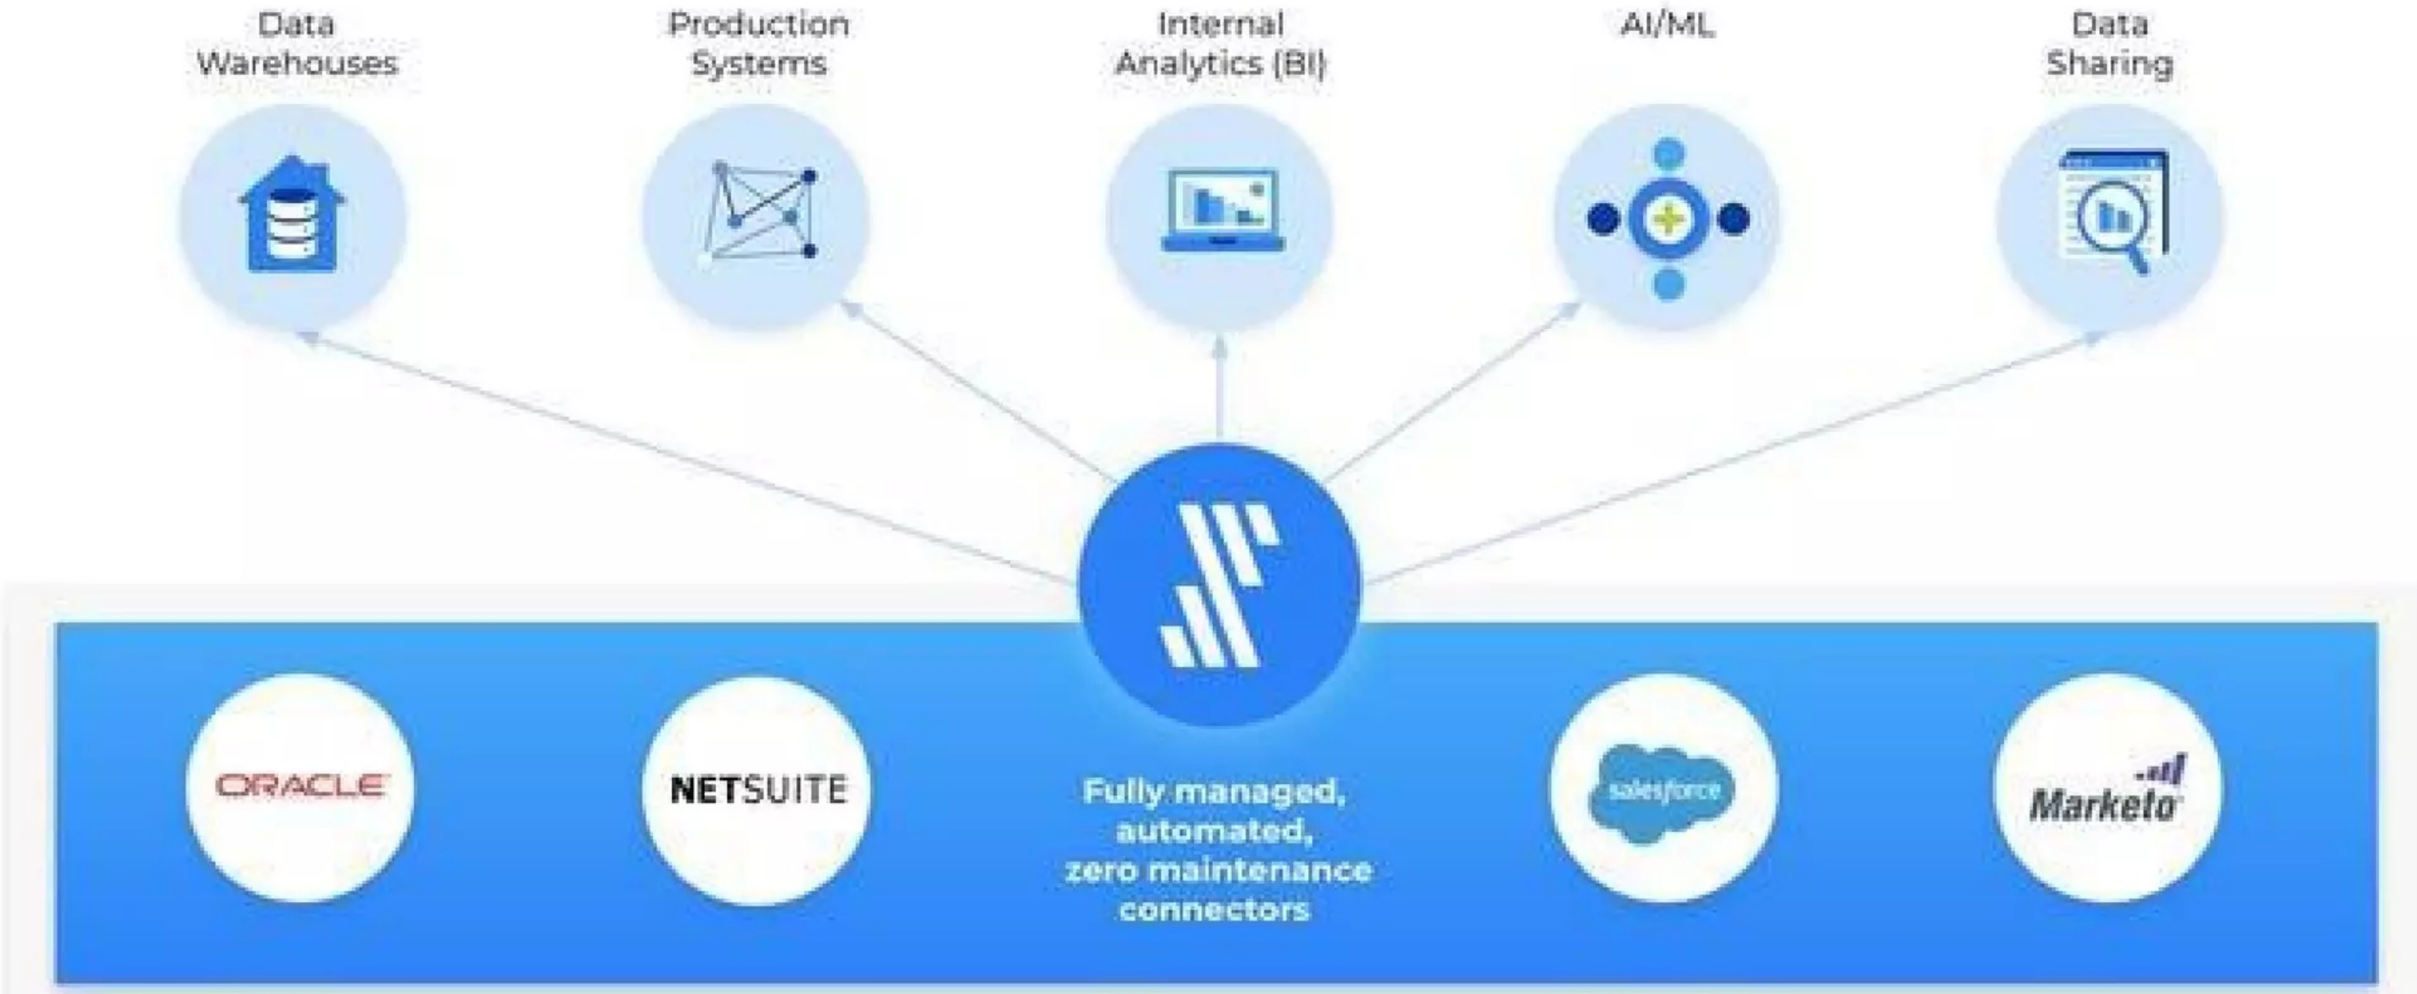

Google Cloud: Marketplace

The Past: Fragmented approaches, no single winner

The Future: Single stable foundation for data driven applications
