Since day one, we've believed;

No company operating in the cloud should ever lose data

Own {backup}

The challenge is

It's a Cloud, Not a Fortress

SaaS platforms have a shared responsibility model

SaaS Provider

- Applications
- Network Controls
- Operating System
- Physical Hosts
- Physical Network
- Physical Datacenter

SaaS Customer

- Information and Data (including backups, archiving, seeding)
- Accounts & Identities
- Device Security (mobile, pcs, server access)

"You are responsible for the data loss/corruption you create"

Top causes of Salesforce data loss and corruption

Even technical sophisticated leaders with a direct state in their Salesforce data falsely believe their data is safe and can be easily recovered. The truth is that you, not the vendor, is responsible for errors and data corruption that happens on your watch. Every admin, integration, and line of code is a potential loss.

> Yes, we recommend you use a partner backup solution. There are more comprehensive, automated solutions for backup of data and metadata on the AppExchange."

Eliminate data downtime

Automated Backups

Super easy to set up. Define the frequency. Works for production and sandboxes. No coding, professional services, or maintenance required.

Intelligent Monitoring

Get real-time alerts to identify statistical outliers or create rules to notify you of anomalies.

Super Easy Comparisons

Visual graphs. Compare any two snapshots. Easily pinpoint loss and corruption.

Precision Repair

Go back in time to restore the exact data you need. Single records, multiple records, or every record from any backup in your history.

Pick Your Storage Platform

AWS Azure

Streamline governance and compliance

Rock Solid Archives

Completely immutable. Highly secure. Meet compliance head on. Immortalize Salesforce records and attachments to comply with internal policies and regulations.

Custom Retention Policies

Put yourself in control of your archives. Easily configure and manage custom archiving policies that define what data to store, how often, retention timeframe, who can restore, and more.

Minimize Storage Costs

Monitor Salesforce data storage usage against prescribed limits and archive data to stay within thresholds.

Simplify Compliance

HIPAA GDPR CCPA

Innovate faster, with less risk

Enhanced Sandbox Seeding

Propagate data to sandboxes for faster innovation and ideal environments to safely develop. Seed perfectly sized, relevant data sets to Developer, Developer Pro, or Partial sandboxes from production orgs to other sandboxes.

Shorten Release Cycles

Create the ideal development and testing environments with subsects of data from production orgs or other sandboxes. Your team will love you for it.

Secure Data

Don't expose sensitive information in sandboxes. Apply custom templates to mask data before it is seeded.

Own{backup}

Established early market dominance in a huge addressable market!

This illustrates how much room to run there is within the Salesforce ecosystem. It has been a great starting point, but OwnBackup's vision is much bigger. This same data protection and governance challenge exists with other SaaS platforms like Microsoft, Workday, ServiceNow, etc.

Own{backup}

Salesforce data protection is just the beginning !!!

Our vision is to be the single pane of glass to manage and protect all your enterprise SaaS data. With each platform we extend support to, our product differentiation grows, as does our addressable market.
