Do great things

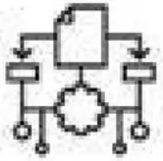

Every company…
Will be an AI company

...but deploying AI is not easy

Data Silos

Data is often stuck in workflow systems and spread across multiple SaaS applications

Nowhere for AI

Workflow systems, data warehouses and data lakes are not built to train algorithms

Skills Shortage

There is an acute skills shortage for machine learning experts, data scientists and AI engineers

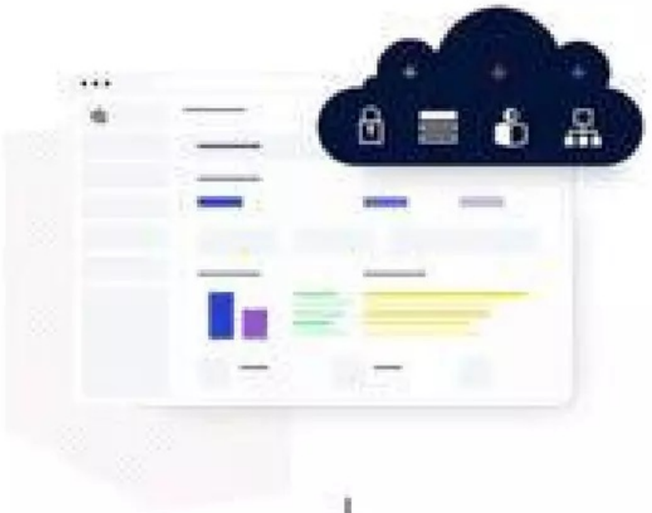

Self Build

The only option today is self building your A.I. environment, which is expensive and slow

We’ve built the first enterprise AI system...

Scalable infrastructure

Leveraging AWS serverless architecture, the AI System is built for handling data at scale.

Full AI workflow

Enables businesses to productionize AI end-to-end in a single platform.

Integrated business applications and extensibility

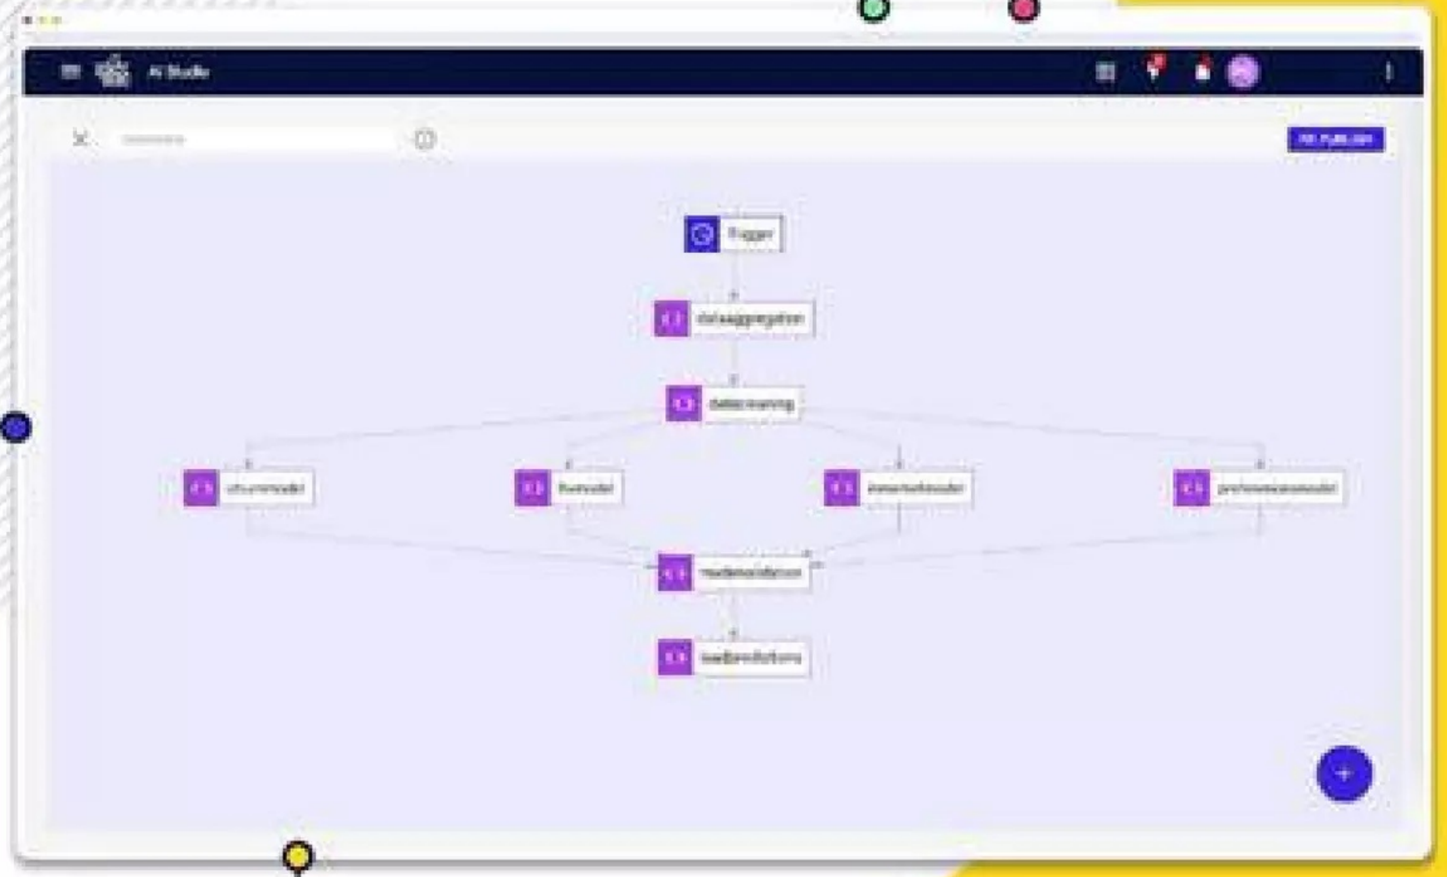

Outputs can be accessed via in-built and custom web Apps or integrated through APIs.

...it will be the catalyst for AI in the enterprise...

Real outcomes
Delivering real, tangible business outcomes

Speed
Giving the enterprise speed, shortening time to value and reducing opportunity cost

One intelligent system
That optimises the whole value chain

...and is the *only* end-to-end AI System

Peak Features

Peak is the only product with an end-to-end AI capability, built specifically for the enterprise

Strong growth, high margins.
