Edge Computing: Now You Can Solve the Speed of Light Problem

Centralized clouds have historically offered easy and scalable infrastructure, but alternative architectures collectively referred to as "Edge Computing" have emerged to challenge the latency and cost tradeoffs.

Managing All of the Edges: Human Intervention at Scale is Impractical

IT Admins are available to fix HW and SW issues in centralized datacenters, but on-premise personnel do not have technical skills to diagnose or track distributed system issues at scale, requiring edge infrastructure to be highly autonomous.

The Cloud to Edge Experience: Not the Same Application Infrastructure

Using the plethora of public cloud services and tools to build a cloud-native app is fast and easy, but none of that infrastructure exists at the edge, forcing developers to re-architect the same workloads to run on a hodgepodge of un-integrated OSS.

Universal Need: Wide Range of Industries Benefit from Edge Computing

Oil & Gas

Telecom

Manufacturing

Entertainment

Gaming

Retail

Security

Agriculture

Finance

The company which develops the most easy, effective, and scalable Edge Computing platform will be positioned to become the next "AWS" of a 12 figure market – disrupting across numerous industries.
