ARRCUS
NETWORK DIFFERENT™

Arrcus Company Summary

August 2019

Company Overview

Mission

- Democratize the networking industry by providing best-in-class software, the most flexible consumption model, and the lowest total cost of ownership (TCO)

Company

- Founded 2016, Headquarters: San Jose, CA.

Target Customers

- Fortune 100, Telecom/Cloud & CDN/Service Providers

Board Investors

- **Guru Chahal**: Lightspeed Venture Partners
- **Steve Herrod**: General Catalyst
- **Chris Rust**: Clear Ventures

CLEAR GENERAL CATALYST Lightspeed

Advisors

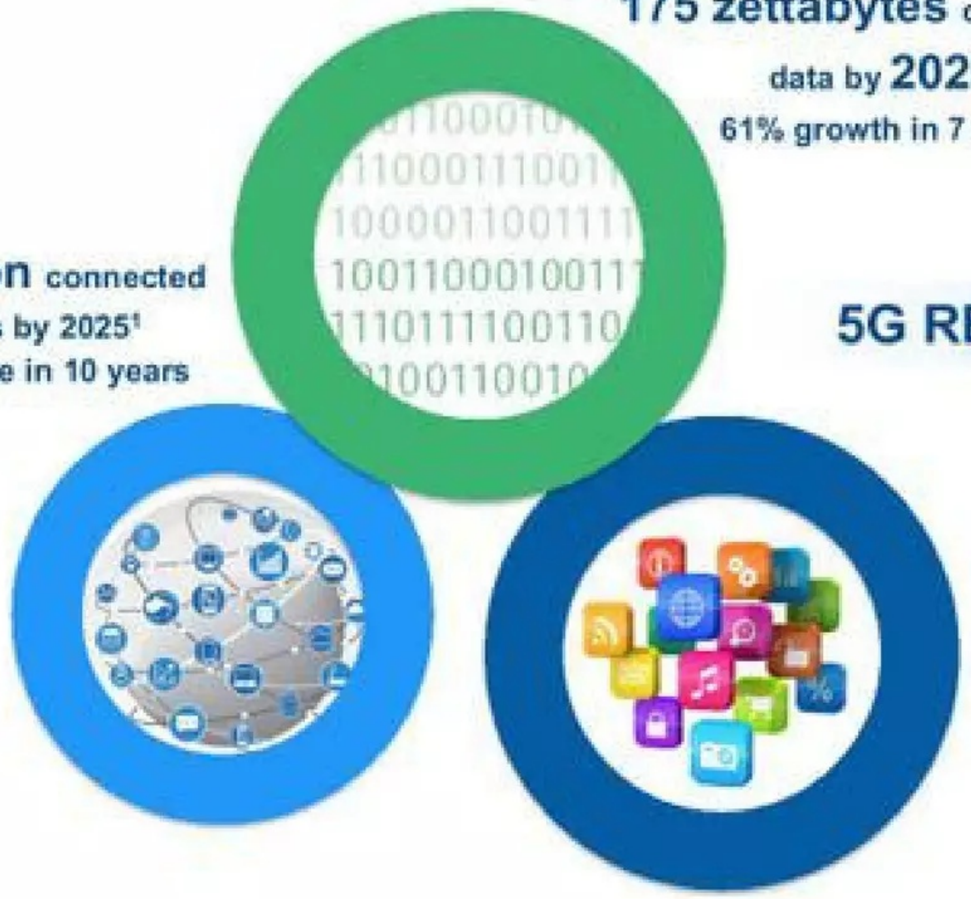

- **Kelly Ahuja**: ex-SVP of Service Provider; Cisco
- **Fred Baker**: ex-Chair IETF/Co-Chair IPv6, Cisco Fellow
- **Amarjit Gill**: SiByte, PA Semi, Maginetics, Viptela etc
- **Nancy Lee**: CHRO, Lime; ex-VP of People, Google
- **Farzad Nazem**: ex-VP of Eng./Oracle CTO/Yahoo
- **Pankaj Patel**: ex-EVP of Cisco Systems
- **Rajiv Patel**: ex-VP of Engineering, Juniper
- **Shawn Zandi**: Network Director, LinkedIn/MSFT

IETF CISCO JUNIPER
YAHOO! ORACLE Lime
Google LinkedIn NTT Group

Exponential Growth in Data Traffic Driving Digital Network Transformation

175 zettabytes of worldwide data by **2025**[2]
61% growth in 7 years

75 billion connected devices by 2025[1]
5X increase in 10 years

5G REVOLUTION

High-bandwidth, low-cost, low-power, low-latency networks

Increasing demand for data-heavy applications:
AI, ML, AR, VR, Connected vehicles, Mission-critical services, Remote device control, etc.

[1] Morgan Stanley analysis
[2] IDC estimate

So, Digital Networks Increasingly Distributed & Hyperconnected

The Control Plane is the Brains of this Network Transformation

High-Performance Routing is Table Stakes for Networking!

FLATTENING OF INTERNET

- Video is 82+% of traffic by 2021
- Subscriber bandwidth growing at 30%+ CAGR
- More direct connections and less transit back-ups

NEW PARADIGMS

- Video dominates but……
- SaaS based business models & stricter SLAs
- 5G accelerates relocations of network functions, data storage to multi-edge compute locations
- Shift to regional and metro peering

ArcOS ANYWHERE

- Smaller footprints, distributed sites
- Greater automation due to greater number of remote sites
- Resiliency required to avoid costly back-ups
- Flexible port density

PEERING MOVES DEEPER INTO THE INTERNET

- IPv4 and IPv6 networks continue to grow
- 5G, IOT, Remote PHY increase device endpoints by 5-10X
- Internal routing continues to grow as more services are distributed and cloud-native
- Router scale requires a no-compromise router longevity approach

EVER GROWING INTERNET ROUTING TABLE

Foundational Elements of Network Transformation

SIMPLE

- Simplified Protocols (e.g. Common BGP control plane)
- Standards based Automation (e.g. OpenConfig/YANG)
- Easy Manageability and Debuggability

SCALABLE

- Architectural Scale (e.g. Internet-scale routing w/ fast convergence)
- Network Scale (e.g. 100G/400G high-perf, low latency platforms)
- Operational Scale (e.g. Resilient, per-process restartability)

SECURE

- Real-time Network Telemetry & Analytics
- Routing Security (ROV)
- DDoS Mitigation

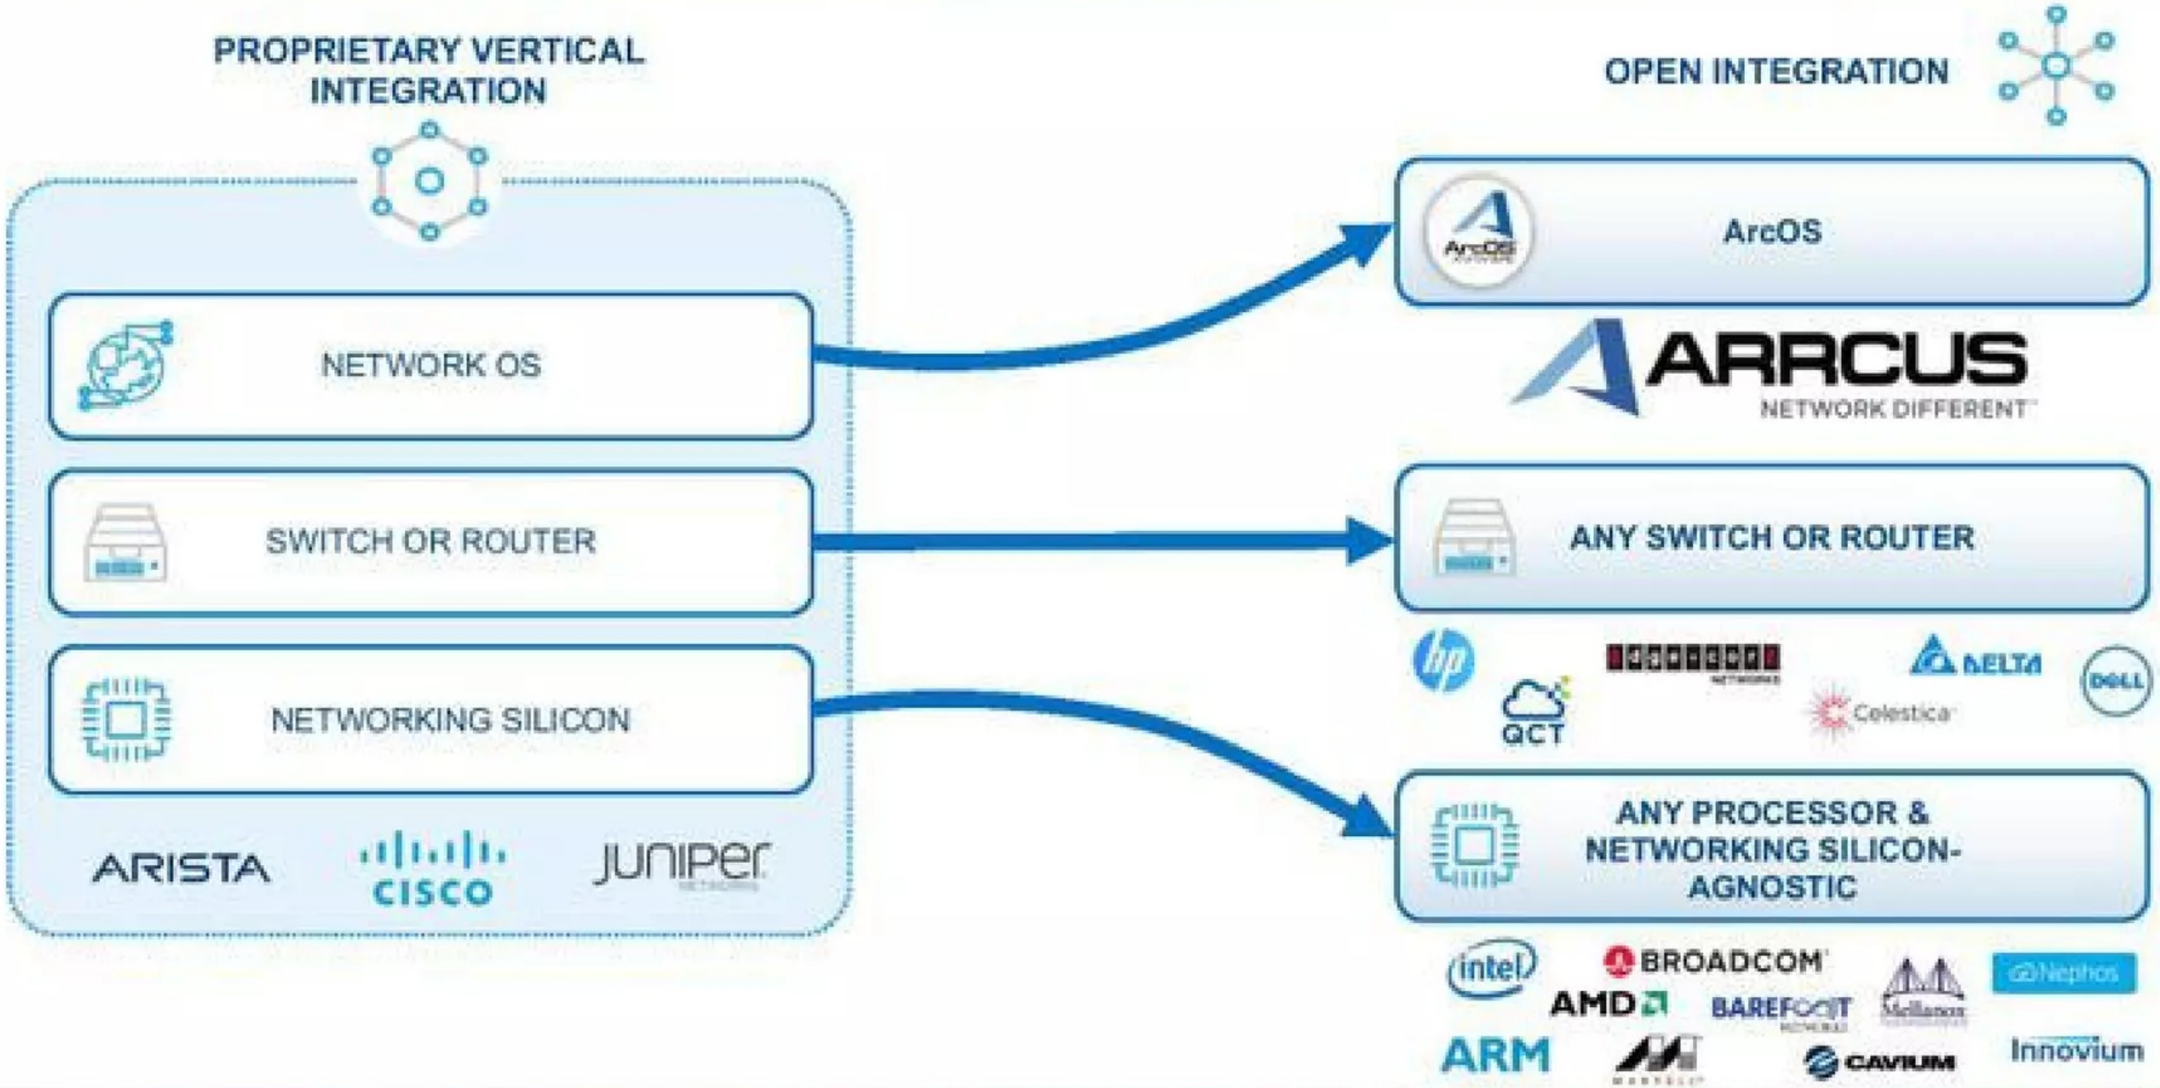

Arrcus: The New OEM

- **Best-in-Class Software**
- **Flexible Consumption Model**
- **Lower TCO**

Select the Right Software with the Right Hardware at the Right Costs

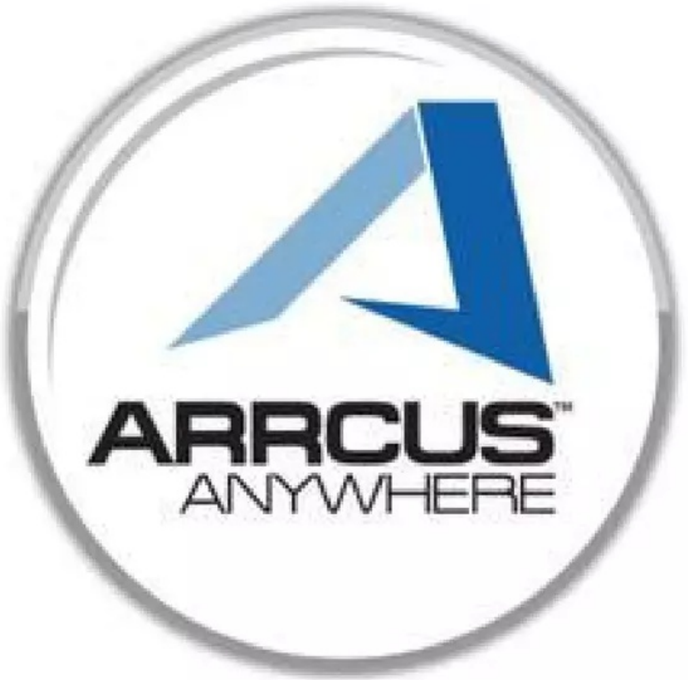

Arrcus Enables Choice

ArcOS Routing: Key Customer Benefits

Arrcus Ready to Scale

- **ArcOS: Network Operating System (NOS)**
  - Carrier Grade at Internet Scale
  - Open, Composable and Micro-Services
  - Physical, Virtual & Cloud Environments Supported
- **ArcIQ: AI-Driven Network Operations Center (AI-NOC)**
  - Highly Correlated Data Analytics
  - Network Security, Traffic Engineering & Health
  - SaaS/Cloud Services based Offering
- **Arrcus: The New OEM**
  - Proven Experienced Team; Execution Oriented
  - Focused Product, Market and Customer Strategy
  - Expansive Use Cases
