The Royalty Revolution is Coming...

"One of the greatest challenges that the music industry faces is the identification and global tracking of performances in repertoire.

This is a pivotal time as we grapple with the exponential need for growth in data and reporting."

Nigel Elderton
Chairman, PRS for Music

February 2020

The Problem

Public Performance Example

A UK artist has written, recorded and released a song globally.

The artist is a member of PRS for Music in the UK

The song is a commercial hit, played in cafes around the world

In this example, we'll use the US, UK and Australia

Each Performing Right Organisation (PRO) attribute plays out differently

This is because distribution is based on their own statistical analysis

The artist is paid 9-18 months later based on lack of data available

The months listed for the artist are based on a survey of musicians in a consultation response (public)

Spotify

The US cafe owner plays the song from a personal streaming play list

BBC RADIO

The UK cafe owner plays the song from a radio broadcast

The Australian cafe owner plays the song from a CD

ascap

The US PRO only pays the artist based on live airplay or a personal device

PRS for Music

The UK PRO only pays the artist based on live radio airplay

APRA AMCOS

The Australian PRO has no evidence of the CD being played, so doesn't pay the artist

As the artist is from the UK and represented by PRS for Music, both the US and Australian PROs provide reporting and funds for the artist

Every year, over $2.7bn is lost globally by artists through this statistical process

Reference for annual lost funds: [redacted]

A Global Opportunity

Initial Targets

400,000+
Licensed Premises

Our Solution

What We've Created

Audio Meter

A low cost hardware solution that simply 'plugs in'

Captures, analyses and transmits secure, compressed music play

Platform

A real-time platform with tens of millions of songs to reconcile in the database

Tags, sorts and reports music playback captured by Audio Meters to PROs globally

Analytics Dashboard

An analytics dashboard harnessing data and insights collected from Audio Meters and the Platform

A service for record labels, publishers, talent agencies and more

Our Solution

How It Works : Public Performance

PRS for MUSIC

APRA AMCOS

ascap

License payer plays music

from any source

The Audio Meter captures the music

The Platform tags, sorts and reports the broadcast

PROs

Receive Audios data for payment allocation

Payment

Artists and composers

Analytics Dashboard - Upsell

to record labels, publishers, talent agencies

Our Solution

From Paper Based Ambiguity, To A Fully Automated Real Time Platform

Manual processing &
ambiguous data sets

Currently
- Paper set lists
- Excel broadcast lists
- Paper statements

Real-world reporting & analytics

Delivering
- Increased efficiencies
- Accurate & tangible data sets
- True insight for members
